Faroës – looking forward to an oilindustry

The Rosebank oilfield very close to the Faroese boundary. Transocean Rather flaring gas at its succesful welltest last summer

Growing interest for the Faroese area

By Mr. Bjarni Djurholm,
Minister for oil and energy

During the debate of the PM's speech, which he held to the nation on the national holiday the 29th of July, the Minister for hydrocarbon affairs, Mr Bjarni Djurholm had the following comments regarding energy and hydrocarbon issues:

"A general debate has been on a proposed new energy policy, and a new power legislation Act was passed during the last sitting. The overriding aim for a new energy policy is that within 2015, 20% of our energy usage on land shall derive from a sustainable resource, and that our fishing fleet shall reduce its energy consumption by 15% compared to the amount caught.

The Faroes are to large extent dependent upon imported oil and app. 95% of our oil consumption is achieved by imported oil. If we are to change this situation, we must to a much greater extent revert to sustainable energy resources and we must also exploit our energy resources much better, by among other things setting demands towards energy usage in connection with new-building and repairs of older constructions and housing in general.

Investigations to date, in connection with the Nólsoy project, indicate that the island of Nólsoy is very well suited for a large-scale project, with the objective of creating a sustainable independent energy system for Nólsoy, whereby all energy

Bjarni Djurholm, Minister for oil and energy

consumption derives from sustainable energy resources.

The project was taken a step forward this spring, when foreign energy companies decided to become members of a project group together with our authorities, tasked with carrying out further surveys to determine how wind energy combined with new technology can achieve the objective of a sustainable society. If all goes to plan the first windmills will be erected on Nólsoy in 2009.

Other steps have also been taken within the energy area; for example a work group has been formed with representatives from Iceland to determine the feasibility of laying a power cable from Iceland to the Faroes, and then there is the project looking at the possibility of converting wave-power into a source of electricity.

Later this autumn, drilling will begin upon a sixth exploration well in our waters and an agreement has been made on a seventh well drilling within the next two years.

Preparations for a third Faroe bidding round have begun and according to plan this will happen later this autumn. It is too early yet to say anything about the interest for this third round, but based upon the activity level, which has been agreed for the Faroe area and the drillings on the UK side of the border, we estimate there is a growing interest for the area west of Shetland and thereby also for the Faroe area".

Atlantic Petroleum – the F – on track to continued gro

By Kjartan Hoydal,
Chairman of the Board, AP

The last year has shown very strong growth in Atlantic Petroleum, AP. This is well reflected in the trust shown by investors and the markets in the AP share. An investor that invested 10 thousand DKK in the first two share offers in 1998 and 1999 would be able to cash a return of around 110 thousand DKK if he sold his shares this year, a healthy return by any standard.

The company was founded with a share capital of DKK 25.5 million. Since the foundation there have been five share offerings, and the current share capital is DKK 112 million in nominal value (approx. £10 million). The number of shareholders is now approximately 5600 of which 70 % are from the Faroe Islands and 30 % are Scandinavian privat and

institutional investors. The Market capitalisation has been above 1.2 billion DKK in the last months

The Company is still strongly rooted in the Faroe Islands. This has been an overarching principle in the Company's strategy and it has been shown to be a strong commercial point overall.

The listing of AP on the OMX Nordic Exchange in Iceland in 2005 and OMX Copenhagen Stock Exchange in Copenhagen marked a significant development in the organisation of the Company. Meeting the requirements for full transparency in all company matters has been a welcome challenge and all information is now readily available to shareholders, investors, markets and the general public in real time on the AP website www.petroleum.fo and most elegantly presented in the last Annual and Consolidated Report and Accounts for the year 2006.

Development

The development of Atlantic Petroleum has been in two phases: The first phase running from 1998 to 2001, where we got our first licenses outside the Faroe Islands and the second phase from 2001 to the end of last year. At this point in time the

Company is prepared and ready to go into the third phase of its development.

Phase One

The idea behind the establishment of Atlantic Petroleum was to use the upcoming Faroese Licensing Round in 2000 as a basis for building up a Faroese oil and gas company and become partner in a strong group of international oil and gas companies. In that way the necessary skills and knowledge to run a professional, competitive, and independent oil and gas company could be achieved. Furthermore, the company would get access to the industry and to more opportunities. The early development of the Company should be based on the activities on the Faroese Continental Shelf. The shareholder base should be strong and 100% Faroese.

The first phase was a success for the Atlantic Petroleum. The Company signed a very favourable agreement with a partnership consisting of the international companies Amerada Hess, British Gas and DONG Energy. This agreement gave Atlantic Petroleum the opportunity to participate in oil exploration in the Faroe Islands with minimum risk, but with a huge upside. Furthermore, our

partners were committed to pave the way for the Company into oil exploration in UK waters.

The partnership was successful in the First Faroese licensing round and was awarded licence number 001.

Phase Two

On the shoulder of phase one the second phase was planned. A Business Plan was formulated in 2001 for the time period 2001 to 2006. The following vision statement was formulated:

To become the leading Faroese independent oil and gas company, financially strong and well-respected in the industry, and prudently managed to provide a robust return to its shareholders, a focus for business integration and development in the Faroe Islands, and benefits to the community as a whole.

The key components of the vision are:

Be active in exploration and production on the Faroese continental shelf
Faroese-based independent upstream oil and gas company
Vehicle for development and diversification of the Faroese business sector as a whole.
Use this situation to grow beyond the Faroe Islands

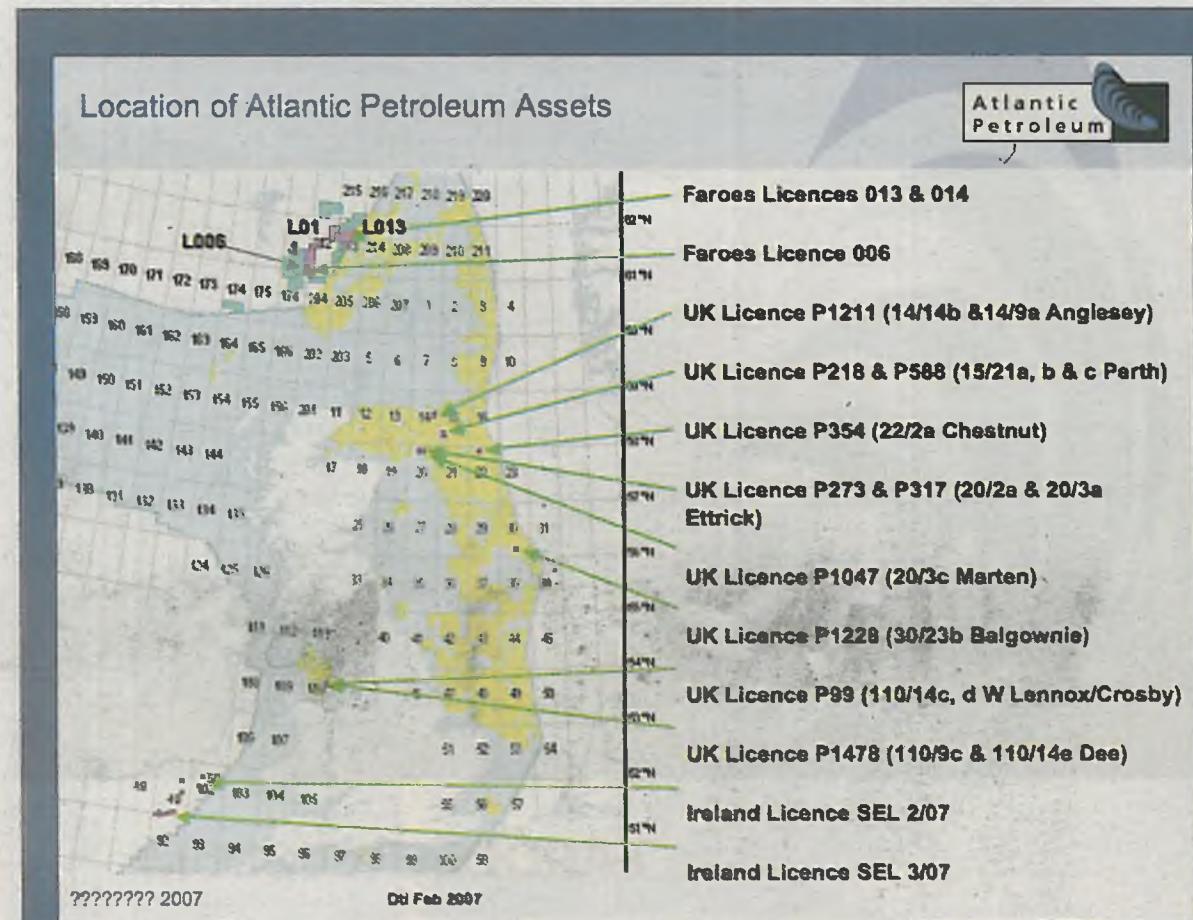

Financially strong with focus on Risk Management

The start of the second phase went as planned. The first UK exploration assets were acquired in 2001 and a new world of opportunities opened up to the Company. Relations with new international players were established. The Company participated in 22nd UK Round and in 2003 Atlantic Petroleum managed to acquire part in three oilfields from Premier Oil, of which two fields were under development, a major step in the development. The Company was able to raise the necessary funds to build up the Company as well as to list the Company on two markets. In June 2005 Atlantic Petroleum was listed on OMX in Iceland, and in October 2006 on OMX in Copenhagen.

Phase Three

The third phase will be built on the shoulders of the previous and new building blocks will be added. The main building blocks or instruments we have today are:

A diversified portfolio spanning from exploration to development, and soon also production
A solid capital base
Access to capital for further

Licence overview - as per 16th August 2007

Development - approval pending			

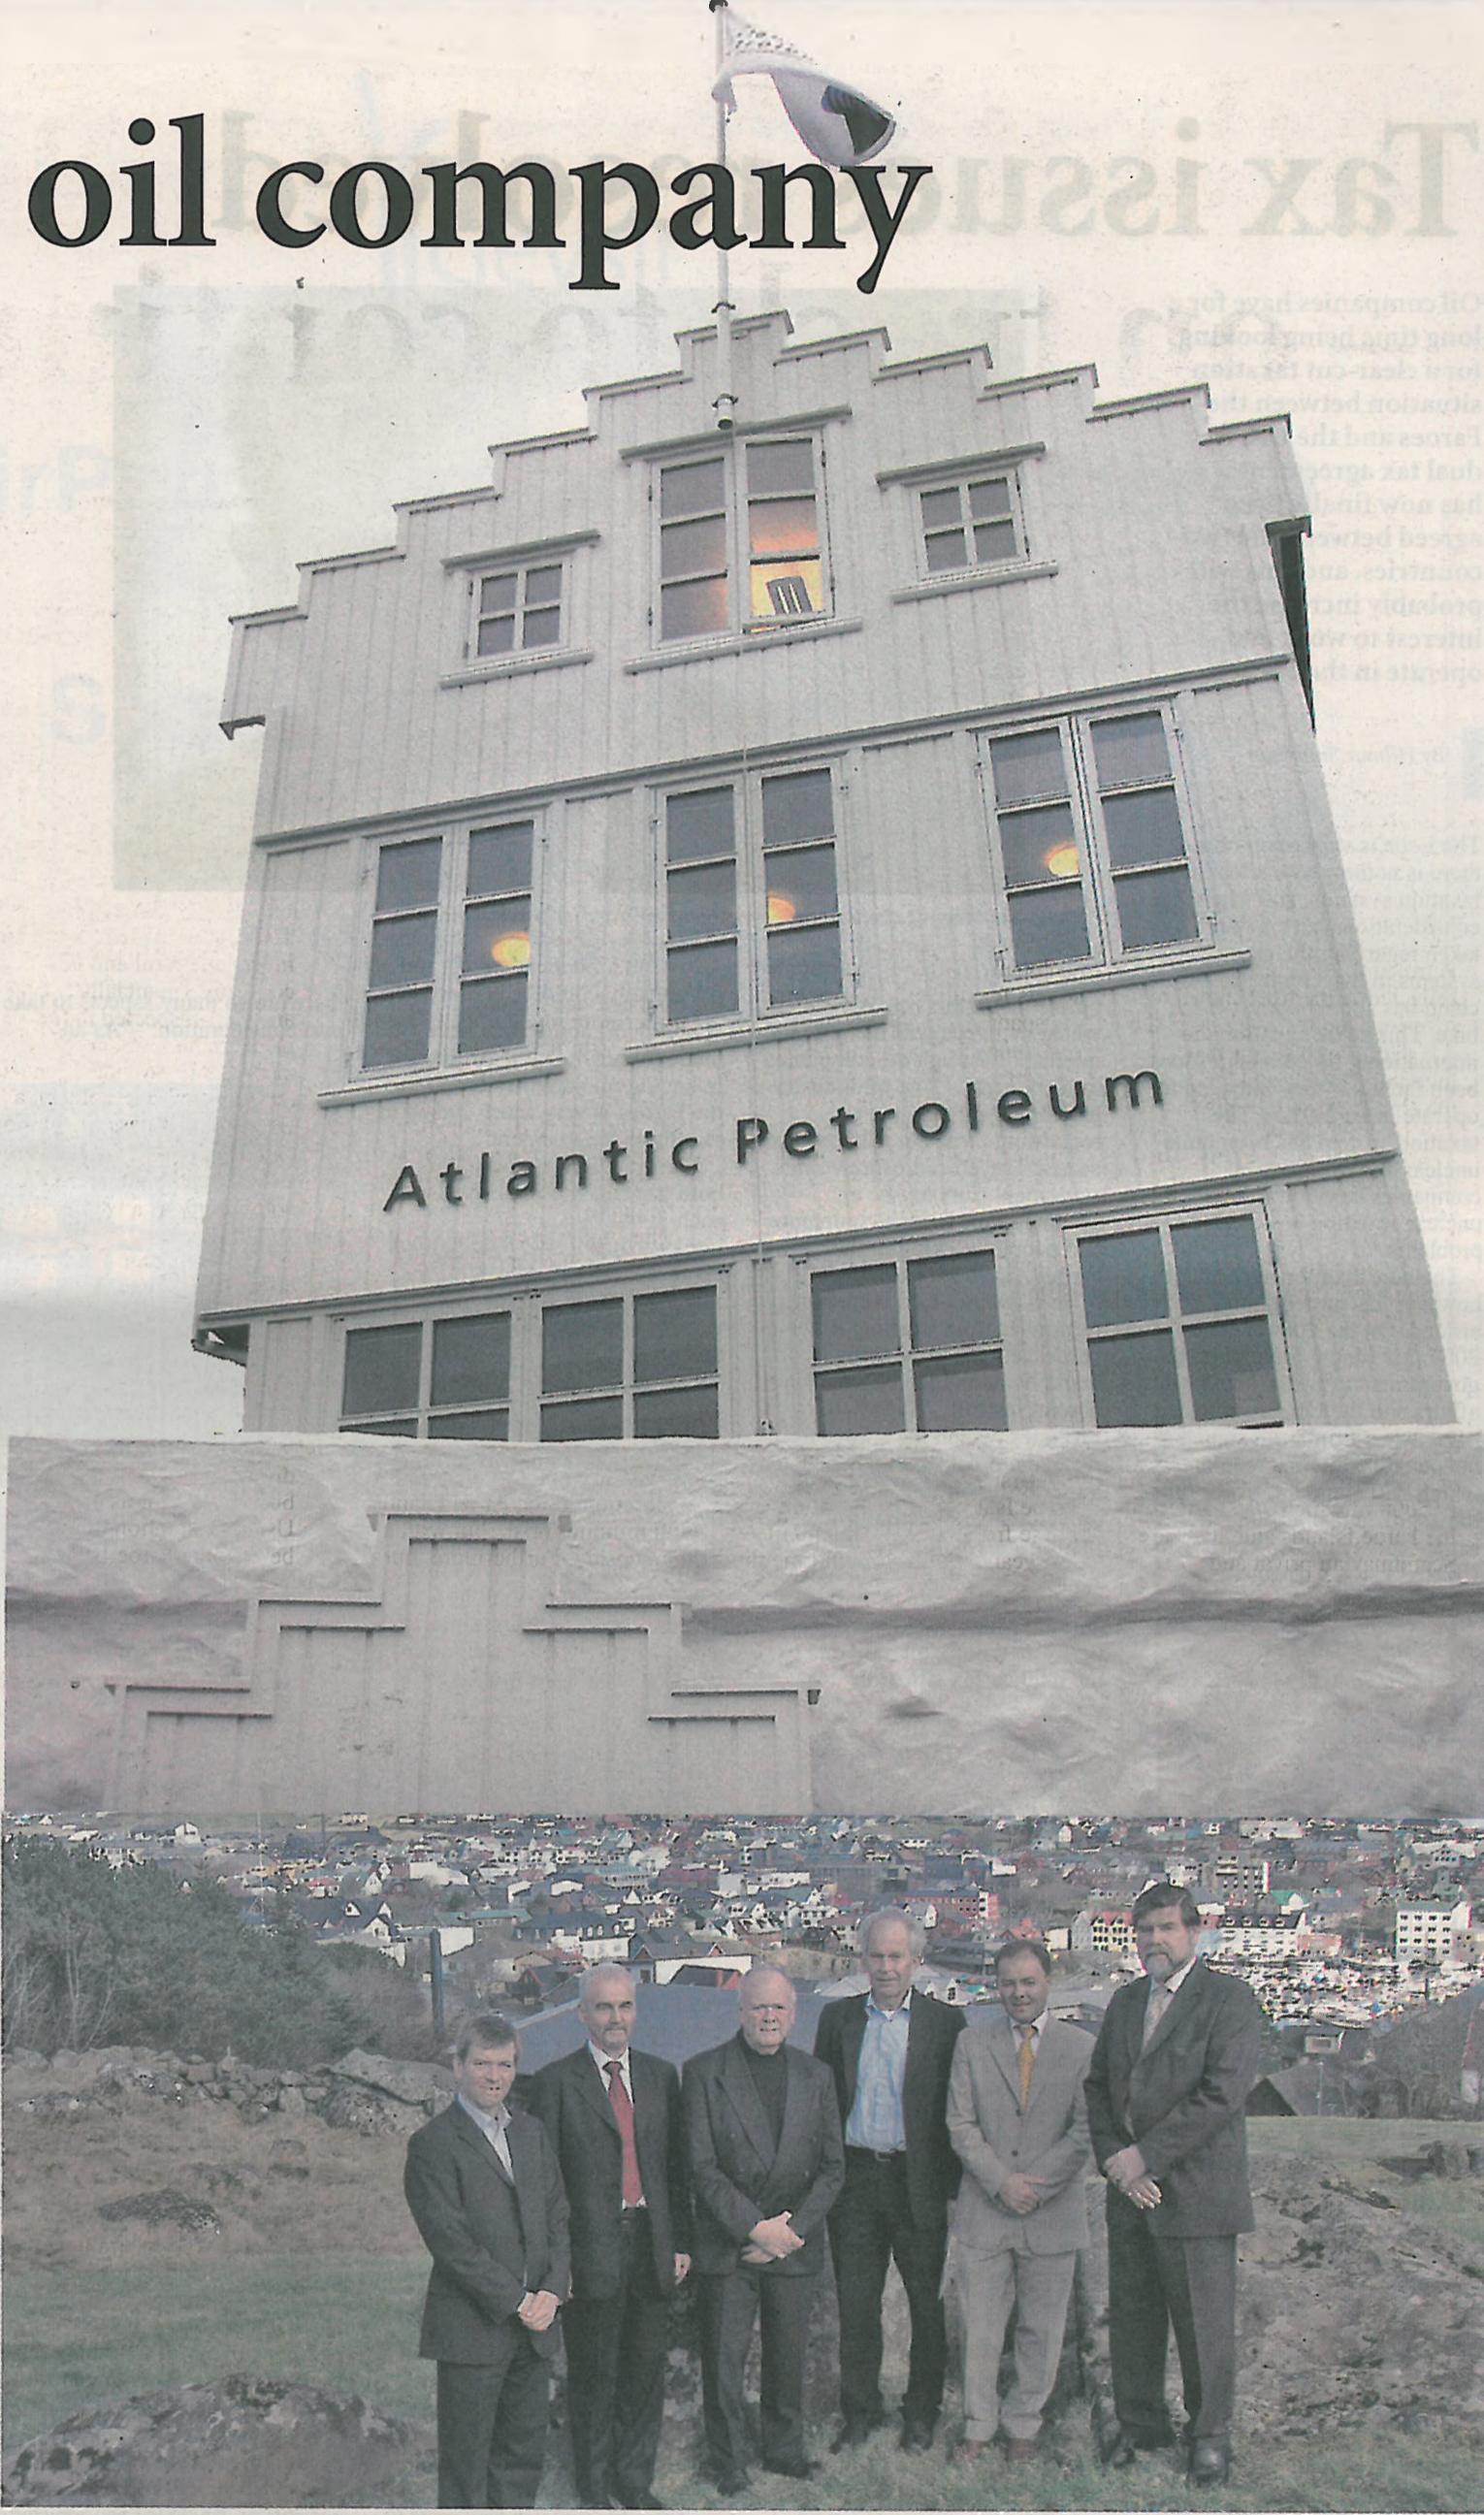

Icelandic oil company with

growth, both in terms of equity
and senior debt
Strong cash flow from own
production the coming years

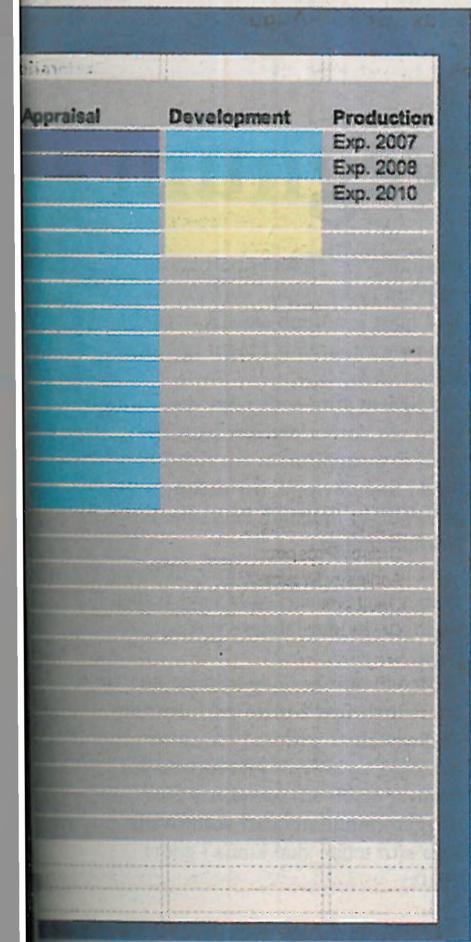

What do we then want to achieve
the coming years? Because the
Company will now have its own
cash flow it is possible to increase
the exploration activities, and
offset the exploration cost against
the income. It is also possible to
take larger steps now in terms of
assets acquisitions and corporate
acquisitions because of the solid
capital base.

So the main elements of the
third phase will be to use the
instruments achieved in the
previous phases to accelerate the
growth to become a middle sized
oil and gas company with
activities in North West European
region. The process has already
started. The establishment of a
subsidiary in Ireland and
involvement in the Irish sector,
the farming into UK Licence
P1047, by purchasing the 17.5%
equity held by Enterprise Oil
Limited and establishment of
senior credit facilities with Bank
of Scotland to finance further
growth.

Focus will continue to be on
preparing the Company for
further risk-balanced growth and
thus adding value to our
shareholders.

Bárður temur aldurnar

Bárður Niclasson, studul frá oljufelögum til doktararitgerð

Úr rúgvuni av verkætlannum, sum oljupengar til vinnuliga færleikamenning eru latnir til, telist verkætlannin hjá Bárði Niclasson úr Hoyvík. Hann hevur vart sína doktararitgerð um alduforsagnir, men er longu farin viðari við eini post. doc. Lat okkum siga, at hann "temur" aldur á doktarastigi

GRANSKING OG FÆRLEIKAMENNING

Eftir Hilmar Simonsen

Sum umtalað í grein aðrastaðni í blaðnum, so bundu oljufelögini, ið fingu leitiloyvi á færøyska landgrunnum í 2000 og 2004, seg til at gjalda ávísu upphædd til vinnuliga færleikamenning.

Skjótt stóð greitt hjá baði færøyskum myndugleikum og oljufelögnum sjálvum, at hesin peningur ikki bert skuldri veitast til færleikamenning við beinleiðis tilknyti til oljuvinnuna, men eisini øðrum vinnugreinum.

Dómi um eina tilíka verkætlann

er verkætlannin hjá 33 ára gamla Bárði Niclasson úr Hoyvík, sum fyrr í ár lat úr hondum Ph.D. ritgerð innan alduforsagnir, og sum hann stutt eftir, i april mánaði, vardi á Fróðskaparsetri Føroya. Aldufrymilin, ið hann hevur víðariment í samband við hesa verkætlann, tekur stóði i veðurforsagnum, streymviðurskiftum og botniðurskiftum kring oyggjarnar og kann út frá hesum rokna seg fram til longd og hædd á aldunum. Viðarimmenningin tekur stóði í øðrum forritum, ið eru ment gjøgnum ávísu tið, serliga í Hollandi.

Saman við sínum aldufrymli megnar Bárður Niclasson at spá um, hvussu stór alda verður á ymsum leiðum nær landi, um veðurforsagnirnar annars halda. Tað honum tørvar fyrir at koma við álitandi alduforsagnum er nevnilega ein álitandi veðurforsogn yvir økið, ið mett verður um.

Hent útróðarkunning

Bárður Niclasen dugir ikki at rópa á aldurnar fyrir at fáa tær at leggja seg, eins og Messias gjørði á Genesareth's vatni á sinni. Hinvegin so tørvar honum

nágreniligar upplýsingar um havdýbd, streym og vindmægi sum input til eitt telduorrit, sum kann rokna út, hvussu aldurnar fara at hætta sær inni millum oyggjarnar og tætt inni á landleidini.

Talan er um alduforsagnir ein slakan fjórðing úr landi og út á einar 12 fjórðingar, ella sum Bárður skemtandi tekur til, so eru tað landkrabbar og frikadellufiskarar, ið fáa stórstu nyttuna av hansara arbeidi. Samstundis er tað eisini nær landi, at torførast er at spá um aldurnar, ti her hava skiftandi streymviðurskifti og veðurlag stórstu ávirkjan. Øðrvísi er longur úti á havinum, har alduforsagnir longu eru tækar frá ymsum veðurstovnum. Sostatt ber við frymlinum hjá Bárði til at fáa alduforsagnir ein fjórðing úr landi og út á alt sjóskið kring Føroyar, sum røkkur út á 200 fjórðingar.

Telduorritið hjá Bárði Niclasson ger nýtslu av einum øðrum forriti innan streymmodelering, sum vegleiðari hansara, Knud Simonsen lektari í havfrøði, hevur staðið á odda fyrir at menna. Tað forritið, sum heldur skemtiliga verður nevnt HÚK (=

Hent Útróðarkunning), greiddi Knud Simonsen saman við øðrum úr hondum fyrir nøkrum árum síðani. Tað forritið hava færøyskir útróðarmenn og skip og bátar annars, ið sigla inni millum oyggjarnar, havt stóra gleði av síðani.

Meðan streymviðurskifti eru lutfalsliga lött at spá um, tí tey eru tengd at flóð og fjøru og astronomiskum viðurskiftum, so sum fjarleika mánans frá jørðini, so er verri at spá um aldur. Hetta kemst af, at neyvar alduforsagnir eru treytaðar av neyvum veðurforsagnum. Tí gerast alduforsagnirnar hjá Bárði Niclasson ongantið meiri álitandi enn veðurforsagnirnar annars eru.

Framvegis á aldutoppinum

Sjálv um hann longu "temur" aldur á doktarastigi, so er Bárður Niclasen ikki sokkin í nakran aldudal enn, men granskár framvegis innan sama áhugaverda evnið. Nú doktararitgerðin er løgd asturum, er hann í gongd við viðari gransking og eina verkætlann ið á akademiskum máli verður rópt en post. doc.-verkætlann.

Bárður leggur dent á, at

neyvleikin við aldumodellinum í stóran mun er tengdur at tættileikanum fyrir útrokningarnar – ella sagt á annan hátt, hvussu tætt 'grid' ein brúkar. Um upplýsingar um havdýbd, streym og vind eru tókar fyrir til dømis hvørjar 100 fermetrar, so kann aldumodellið gera neyvari útrokningar, enn um somu upplýsingar bert eru tókar fyrir hvørjan ferkilometur.

Hinvegin skal havast í huga, at so hvort sum tættileikin minkar, so krevst stórrri rokniorka, og tað setur aftur stórrri krøv til skjótleikan hjá teldunum.

Leggjast kann aftur at, Náttúruvísindadeildin hjá Fróðskaparsetrinum nýligen hevur fangið dagførða telduútgerð, so hetta fer uttan íva at betra um möguleikarnar hjá Bárði at menna ein aldufrymil, ið kann gera enn neyvari alduforsagnir. Hendan telduútgerðin, sum eisini aðrir granskárar á Fróðskaparsetrinum njóta gott av, er sponsorerað av Atlantic Petroleum og Geysir Petroleum.

Post. doc. verkætlannin hjá Bárði Niclasen kemur væntandi at taka tvey ár og verður stuðlað av Granskingarráðnum og Fiskivinnuroyndum.

Nýtsluokir fyrir aldumodell

Ítokiliga sæd kann aldumodulin hjá Bárði Niclasson millum annað brúkast til:

- at útvega upplýsingar um alduvíðurskiltini í samband við bygging av havnum
- kanningar av, hvonn tydning alduvíðurskiltini hava fyrir reinsan av botninum undir alibrókum, og annars í sambandi við dimensionering av alibrókum og havnum
- at verða bent amboð hjá skipaferðsluni, umfram til kanningar av undir hvorjum umstöðum ringur sjógyr ávirkar summi okir

Oljupengar figgjað verkætlana

PhD-verkætlannin hjá Bárði A. Niclasen er figgjað av Statoil-bólkinum, ið er eitt samtak av oljufelogunum Statoil, Phillips, Enterprise og Veba. Liðugtgerð av PhD-ritgerðini er eisini stuðlað av Visindagrunninum hjá Føroya Sparikassa og av Náttúruvísindadeildini.

Visti tú:
Aldumodellið hjá Bárði Niclassen er ikki tokt á marknaðinum enn, men til ber at siggja alduforsagnir úti á havinum á til dømis hesum heimasiðum:

Sosialurin: The leading source of information within the oil and gas industry

By Jan Müller, Editor in Chief
jan@sosialurin.fo

The edition of Sosialurin you have in your hand has been prepared in co-operation with numerous Faroese companies that are participating in Offshore Europe 2007. In co-operation with companies that are active in the exploration for oil and gas on the Faroese Shelf.

Sosialurin, founded in 1927, is the biggest newspaper in the Faroe Islands. Sosialurin has focused on the Oil and Gas industry for the last 30 years and is therefore the leading distributor of oil and gas related information in the Faroes. Our focus has primarily been on the Atlantic Margin. In the course of covering developments, we have been present at most of the ONS and Offshore Europe exhibitions in Stavanger and Aberdeen over the last 15 – 20 years.

The Atlantic Margin has changed much in recent years. There was considerable optimism for the area on the back of the UK Schiehallion and Foinaven discoveries, and following the boundary agreement between the UK and the Faroese in 1999 the industry embarked on exploring the Faroese shelf with no less than 8 commitment wells. The initial wells showed that optimism might have been premature, and the oil companies went back to the drawing board looking at prospectivity

The Faroese »oildance« as depicted by the famous Faroese cartoonist, Oli Petersen

further to the north of the initial area of interest. This new-thinking prompted two wells in basalt covered areas. The first of these, with Statoil as the operating company, was a dry hole. The William Prospect with BP as operator is set to spud later this year.

It will be interesting to see what the William well might uncover. In the meantime the Faroese can take some comfort in the fact that the UK Rosebank discovery operated by Chevron seems to be a success. This could mean a lot to the prospectivity on the Faroese side and it will in any case mean that an infrastructure will be located close to Faroese waters which again could lower the economic threshold for potential Faroese discoveries if they are made nearby.

Oil and gas exploration is a long term activity with great uncertainties. Sosialurin has been following this activity for about 30 years and it is our hope that there will be plenty for us to cover over the next 30 years, so that the only uncertainty for you, the reader, will be the geological uncertainty.

Much money although no oil

In the Faroes not a single drop of oil has been produced yet, but this situation has not prevented income from large oil revenues. In total the Faroese society has made app. 200 million kroner directly from the oil industry, since oil exploration efforts began seven years ago

OLJUINNTØKUR
By Hilmar Simonsen

It pays to explore for oil. This is absolutely clear if you look at the income made by the Faroe society, linked to oil exploration in one way or another. Or more correctly, if we just look at part of these incomes.

An overview compiled by Jarðfeingi shows that during the period from 2000 to the awarding of the first exploration licenses and up to 2006, some of the oil revenues had reached 200 million kroner. In the overview, it is stressed that these are not all the oil revenues, but just some and the period is to end of 2006.

The actual income most

probably began in 2001, when drilling started upon the first exploration well in south western part of the Faroe plateau. Drillings continued until 2002, when the last drilling from the first round was completed. Oil revenues however, did not stop there, but did fall somewhat if you study the tax incomes for individuals and companies.

According to the Jarðfeingi overview, incomes from tax and exploration licenses (acreage payments) totalled 19,5 million kroner in 2001, in 2002 they were 22,3 million and during the years 2003 – 2006 between 7 and 9 million. On top of this are duties from the sale of seismic licenses issued to Western Geophysical from 1994-95 gave app. 15 million kroner.

The largest amounts however stem from the support of various industrial competence, which during this period represented 107 million kroner. Of these, 90 million were agreed ultimo 2006, while the remaining 17 million either are or will be agreed sooner or later for various projects.

No total overview of all the revenues

Mr Petur Joensen, principal at Jarðfeingi told Sosialurin that there are other incomes, for

In total the Faroese society has made app. 200 million kroner directly from the oil industry

example from Faroe companies working in the oil industry and the taxing of them. However they have not been recorded specially at the Inland Revenue so it is impossible to see and record them.

Neither is there direct or indirect incomes from the Sindri fund, which is a fund established by oil companies in the year 2000, and which objective is to support scientific research within the oil industry, included in the

overview. It has to be said that several of these projects are being conducted at foreign institutions and universities, and therefore it is difficult to evaluate how large a part of the money flows through the Faroe economy.

“Sindri is of a special nature, which possibly can be compared to the work done by the oil companies in connection with the Faroe area. Expenditure of that work is not calculated as an

income for the Faroe society. It is all a question of definition”, Mr Joensen points out.

He stresses that the overview is only intended to highlight what incomes the various posts in the overview have generated. Therefore we are talking of a minimum amount of 200 million kroner, which the Faroe society has gained from oil exploration. The actual amount is somewhat higher than this.

Nógvir pengar hóast eingin olja

I Føroyum er eingin dropi av olju framleiddur enn. Men tað hevur ikki forðað fyrir stórum oljuinntøkum. Tilsamans hevur føroyska samfølagið forvunnið í minsta lagi 200 mió. krónur, ið hava beinleiðis tilknýti til oljuvinnu, síðani gongd kom á oljuleitingina fyrir sjey árum síðani

Tað loysir seg at leita eftir olju.

Tað stendur greitt um vit hyggja eftir teimum inntøkum, sum føroyska samfølagið hevur forvunnið, ið á einn ennan hátt eru knyttar at oljuleiting. Ella rættari sagt, um

vit hyggja eftir bert einum parti av hesum inntøkum.

Ein uppgerð hjá Jarðfeingi visir nevniliða, at i tíðarskeiðnum frá 2000, tá fyrstu leitingarloyvini vórðu givin, og fram til og við 2006 vórur ‘nakrar’ av oljuinntøkunum komnar upp á 200 mió. krónur. I uppgerðini verður dentur lagdur á, at talan ikki er um allar oljuinntøkurnar, men um nakrar, og hesar ganga sum sagt fram til endan av 2006.

Tær veruligu inntøkurnar ið munu byrja i 2001 tá farið var at bora fyrstu leitingarbrunnarnar í úttasta landsynningspartinum av føroyska

landgrunninum. Hesar hildu á til 2002, tá seinastu boringarnar vórðu gjørðar í ti umfarinum. Men oljuinntøkurnar stóðgaðu ikki upp tá, hóast tær minkaðu um hugt verður eftir skattainntøkum frá persónum og felogum.

Sambært yvirlitum frá Jarðfeingi vórur inntøkur frá skatti og leitiloyvum (viddargjaldi) tilsamans 19,5 mió. krónur í 2001, í 2002 vórur tær 22,3 mió. krónur, og árinu 2003-2006 millum 7 og 9 mió. krónur. Haraftur at hava avgjöld fyrir sölum av seismikkloyvum latin Western Geophysical í 1994-95 givið umleið

15 mió. krónur.

Men störstu upphæddirnar eru komnar umvegis stuðuli til vinnuliga færleikamenning, sum i hesum tíðarskeiðnum vórur 107 mió. krónur. Av hesum vórur 90 mió. krónur játaðar ultimo 2006, meðan eftirverandi 17 mió. krónurnar antin eru, ella verða játaðar fyrr ella seinni til ymiskar verkætlani.

Einki yvirlit yvir allar inntøkur

Petur Joensen, fulltrúið á Jarðfeingi, sigur við Sosialin, at aðrar inntøkur eru eisini, sum til dómis inntøkur hjá føroyskum felögum, ið hava arbeitt í

oljuvinnu, og skatturin av teimum. Men hvørgar av hesum verða gjørðar serskilt upp í landskassaroknskapinum, og ti ber ikki til at siggja tær serskildar.

Heldur ikki eru beinleiðis, ella óbeinleiðis, inntøkur frá Sindri-grunninum, ið er ein grunnur settur á stovn av oljufeløgunum í 2000, ið hevur til endamáls at stuðla vísindaligari granskning, ið burturav hevur við oljuleiting at gera, við í yvirlitum. Sigast skal, at fleiri av teimum verkætlunum ganga fyrir seg á útlendskum stovnum og lærdom háskulum, og ti er ringt at meta um, hvussu stórir partur av teimum pengunum renna í gjøgnum føroyska samfølagsbúskapin.

- Sindri hevur ein serligan karakter, kann kantsa samanberast við tað arbeiði, sum oljufeløgini gera í samband við føroyska økið. Útreiðslurnar at við arbeiðinum verða vanliga heldur ikki roknaðar sum figgjariintøka til føroyska samfølagið. Hetta er alt sjálvandi spurningur um definítion, visir Petur Joensen á.

Hann leggur dent á, at nevnda uppgerð bara er ætlað at lýsa, hvat jüst teir nevndu postarnir í yvirlitinum hava givið av sær peningaliga.

Sostatt er talan um eina minimums upphæddi á 200 mió. krónur, sum føroyska samfølagið hevur fingið burtur úr oljuleiting. Veruliga upphæddin liggur helst nakað væl hægri enn hetta.

Yvirlit yvir nakrar inntøkur til føroyska samfølagið frá oljuvinnu til og við 2006

www.dongenergy.com

WE SEARCH DEEP AND AIM HIGH

DONG Energy participates in licenses in Denmark, Norway, the UK and the Faroe Islands. In total we are active in around 70 licenses in the North Sea and the Atlantic Margin. We produce oil and natural gas in the Norwegian and Danish part of the North Sea, and from October 2007 from the Ormen Lange field in Mid Norway.

We participate in every phase of the energy process all the way to the consumer – from the rigs in the North Sea, power stations generating electricity and heat, and wind farms, until we

market the energy and convey it all the way to our one million customers' doorstep in Denmark and abroad. This ensures a highly reliable supply of energy and gives us the necessary expertise for developing our company.

Innovation is an important part of our everyday work. We are at the cutting edge in the development of renewable energy, not least in the establishment and management of wind farms – from the north of Norway to the south of Europe.

Recruiting Specialists

We provide highly specialized and trained manpower to the oil industry:

- Electricians
- Welders
- Mechanics
- Machine workers

Since PAM Offshore Service was established in 1998, we have been a natural and reliable partner making services for the offshore industry, primarily in Norway.

For PAM Offshore Service it is very important to build up reliable relations with the industry and to have good partnerships.

The benefit we have got from a long history of maritime involvement, is an obvious advantage in the forthcoming offshore activities in the Faroes.

Føroya Tele lands large

By Jan Müller, journalist
and Editor in Chief

Føroya Tele, the largest telecom company in the Faroes, is about to sign a contract with one of the world's largest oil companies British Petroleum or better known as BP. This is a five-year contract and could be close to 100 million kroner writes Sosialurin in its Monday edition.

The contract is to link two of the producing oilfields west of Shetland, Schiehallion and Clair into the SheFar-cable, which is currently being laid between Shetland and the Faroes. This contract could also become the door opener for Føroya Tele as a supplier of various telecommunications to a large oil company.

This is the largest single contract ever signed by Føroya Tele.

Sosialurin understands that negotiations regarding this very exciting cooperation between one of the world's largest oil companies and the largest IT Company in the Faroes are in the final stages.

Considerable savings for BP

There will be considerable

savings for BP as they modernise the communications between oilfields where BP is the operating company and the land-based head office. To date BP has been forced to send all data and send IT specialists to the production site to deal with the many issues. This situation requires both transport and accommodation onboard the production platforms involved.

By linking these two production units with cables and tying into the SheFar-cable, which will run from Scotland to Shetland to the Faroes, BP will be able to send almost unlimited amounts of data ashore. BP will gain direct access to the Scottish mainland by the SheFar-cable.

It is understood BP will initially rent data capacity for a five-year period.

The linking of oil platforms west of Shetland ashore is not a new idea. The demand for a permanent link ashore has been around for many years and a dialogue has been on-going on how to link oil platforms to the mainland. Already when the FarIce-cable was laid, this issue

was debated, and when the SheFar-cable became a reality a link between oil platforms and the mainland also became a natural part of the dialogue.

It is quite clear if we look ahead and at the development of an oil production west of Shetland in general, that it may become a reality to link future oil producing fields by the Faroe border to this cable or more appropriately to the other producing oilfields already connected to the SheFar-cable.

There is, and there will be an ever increasing requirement from the oil companies for telecommunications, which is not being met today. For Faroe telecommunication companies an oil industry west of Shetland and close to the Faroe border could be worth its weight in gold.

Change routines

So then, what can oil companies save by cooperating with a Faroe telecommunications company?

According to sources Sosialurin has spoken to the expenditure saved by BP could

be substantial as data can be sent directly ashore instead of transporting experts onboard platforms and the considerable effort involved saved. The question quite simply is also of installing modern telecommunications onboard the oil platforms and the FPSO vessels. This solution demands a cable and IT capacity. An oil company does not normally have telecommunications as its core interest area, and therefore it is sensible to cooperate with a telecommunications company capable of delivering such a service. This is where Føroya Tele comes into the picture, as it is capable of delivering both cables and the services required. It could be asked if not this was a task for British Telecom for example, and an answer could be that this may be regarded as too small a task for the larger telecom companies.

On the other hand a certain size of telecom company is required, which the oil companies can fully rely upon as a partner. Føroya Tele seems to have such a required size as a deal is on the doorstep.

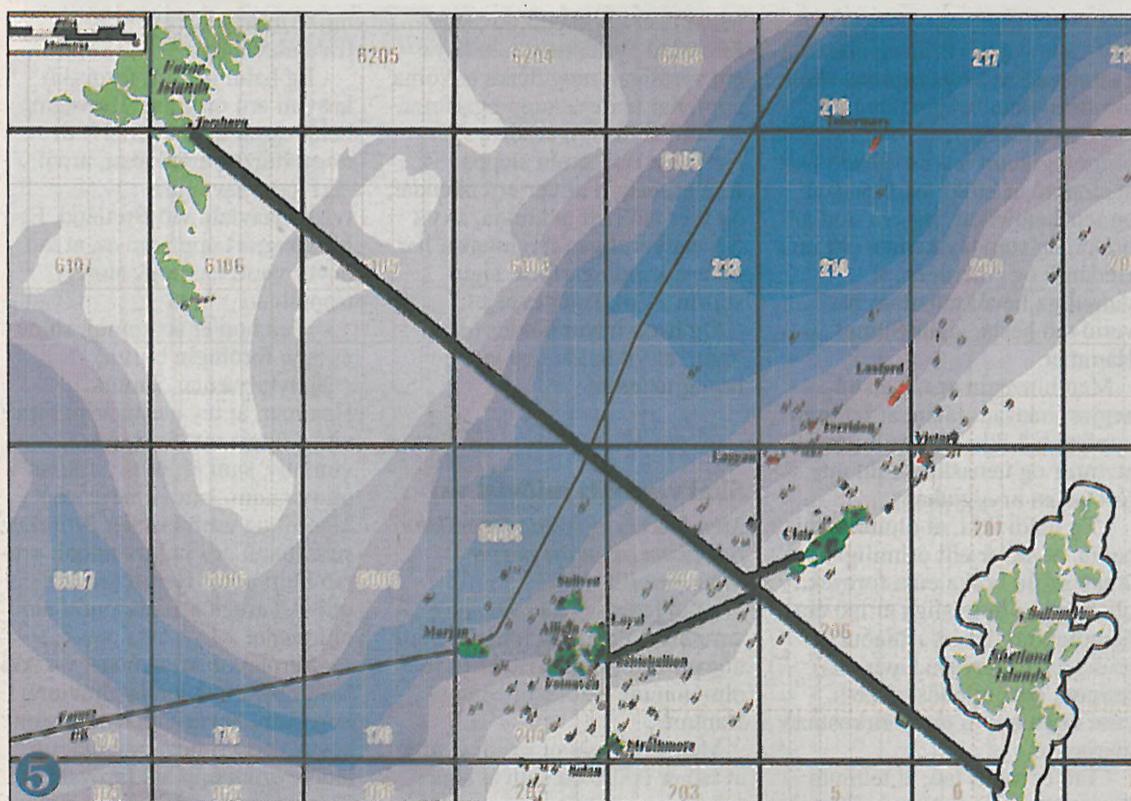

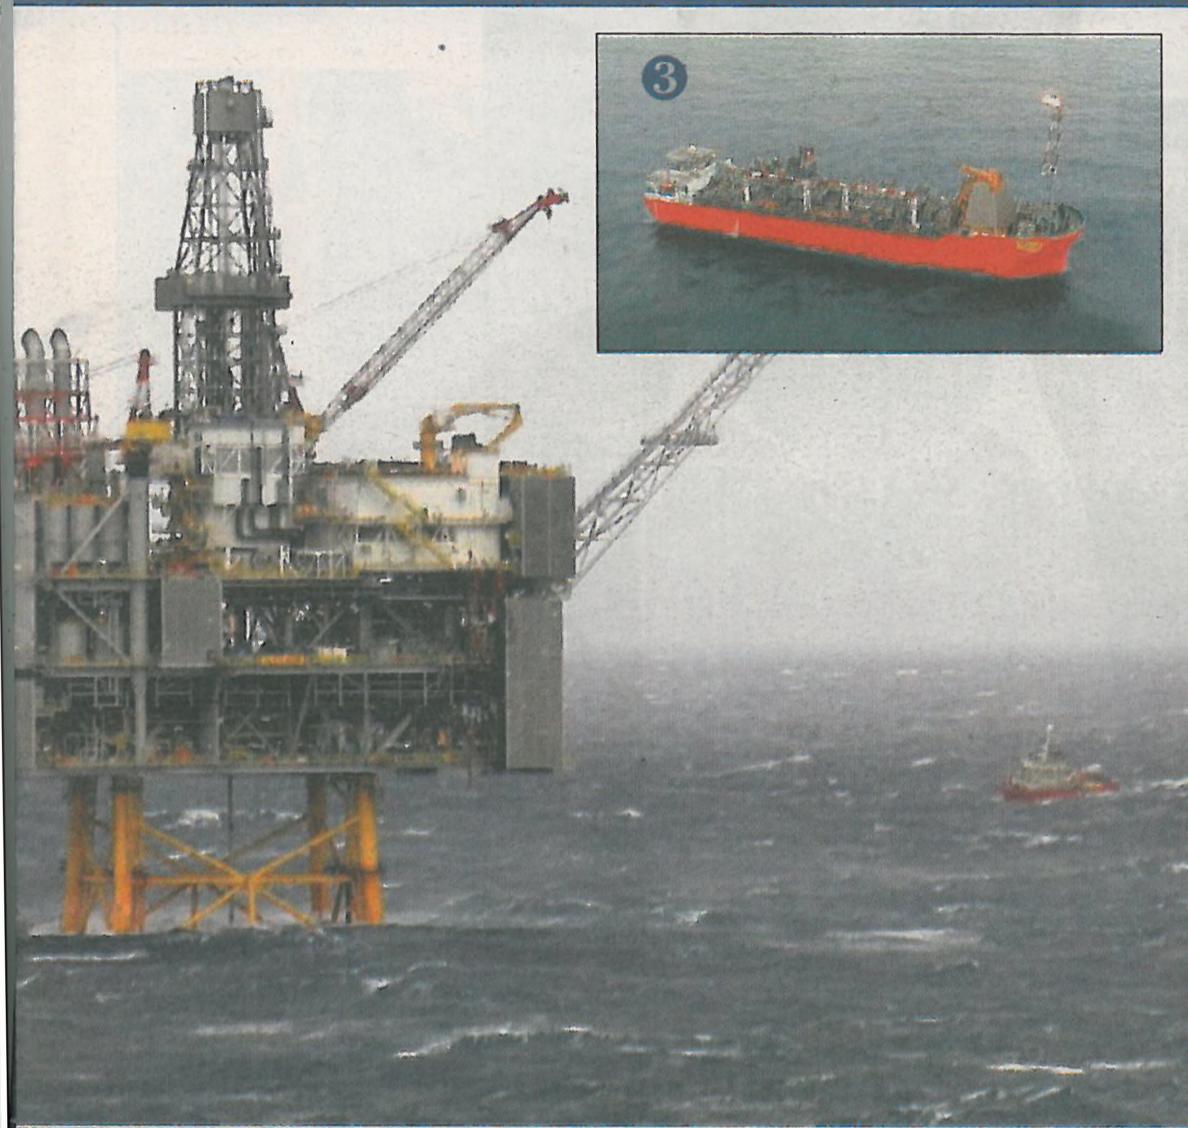

SheFar-cable in the Faroes in September

The question is also what other services could come in the wake of this cooperation. For example, broadband and other wireless services. A futuristic question is how a company like Føroya Tele could handle all telecommunications services onboard an oil platform.

It is understood that the SheFar-cable will come ashore in the Faroes in September and the cables to Schiehallion and Clair are in the process of being laid. Sosialurin has tried to get a comment from the Føroya Tele CEO, Mr Kristian Damsgård, but he does not at the moment wish to make any comments, but he will confirm that negotiations have been with BP regarding cooperation.

The whole issue has been raised in public before however. At a meeting at the Oil Thing recently, it was mentioned that Føroya Tele is working on intentions of establishing a close cooperation with a giant oil company and in the event these

Large contract from BP

intentions came to fruition Føroya Telecom saw large future opportunities in becoming a supplier to BP in several of the areas the Faroe company is already engaged in. Recently the Shetland News wrote that the

SheFar-cable could possibly form the basis for cooperation between Føroya Tele and BP. The paper wrote that in connection with the 800 kilometre cable project between Scotland and the Faroes, Føroya Tele intended to link the

Scheihallion- and Clair oilfields with the SheFar-cable.

project, as the project immediately becomes more feasible financially.

Door opener

As mentioned previously, this project could become a door opener for Føroya Tele regarding many other services, both here and not least abroad. It is no big secret however, that both patience and professionalism is required if a contract is to be

established with a large oil company. The beau racy is immense and it is all important to get a foothold and there are several indicators, which suggest that Føroya Tele is doing just that. The amounts involved could be very large and these would in turn reflect in the export statistics as figures, which have got absolutely nothing to do with our mainstay industry – the fishing industry.

Hava ein fingur við í spælinum á nógvum økjum

Hetta eru ikki tey, sum eru mest sjónlig í oljuvinnuni, men tey hava ein fingur við í spælinum á nógvum økjum

OLJUVINNA

Eftir Áka Bertholdsen
aka@sosialurin.fo

Tað er ikki at dylja, at oljuvinnan er ein ógvuliga samansett og fjøltattað vinna, har summir partar eru sjónligari enn aðrir.

Ein av teimum færsku fyritókunum, sum i fleiri ár hefur gjört seg gallandi í oljuvinnuni á mongum økjum, er fyritekan, Virkisráðgeving, i Runavík.

Hóast Virkisráðgeving ikki er tann fyritókan, sum er mest umrødd í oljuvinnuhöpi, hefur hon verið í vinnuni í nógv ár, og tey hava eisini verið við á oljemessum tey seinastu nógvu árin.

Tað, sum tey serliga hava lagt seg eftir, er at veita virkjum og fyritókum í oljuvinnuni ráðgeving á nógvum økjum.

- Eitt, sum vit gera serliga nógv við, er at hjálpa fyritókum, sum ætla sær upp í oljuvinnuna at lúka øll tey krövini og at fáa tær góðkennningar, sum oljuvinnan setir til sínar veitarar, sigur Símun Hammer, stjóri á Virkisráðgeving.

Her kann talan vera um góðsku-

skipanir, heilsu- og trygdarskipanir, sum oljuvinnan setir stór krøv til og umhvørviskipanir.

Tað merkir, at ein fyritóka, sum hevur hug at royna seg í oljuvinnuni, kann venda sær til Virkisráðgeving og fáa hjálp til at lúka allar tær treytir, sum oljuvinnan setir.

Og hetta er eitt virki, sum tey hava rakt blett við, tí Símun Hammer sigur, at tað eru fáar færskar fyritókur í oljuvinnuni, har tey ikki hava havt ein fingur við í spælinum undir einum ella øðrum formi.

Tað eru í allar mesta mun færskar fyritókur, tey arbeiða fyrir, men viðskiftafólk eru eisini utanlands.

- Tað eru nógvar fyritókur, sum venda sær til okkara og har vit hava hjálp til teimum at fáa tær neyðugu góðkennningar.

Hevur ein fyritóka brúk fyrir fólk, kann ráðgevingarvirkið í Runavík eisini hjálpa til við tí.

- Vit hjálpa fyritókum at finna tey røttu starfsfólkini til millumeiðarárarstöði á ymsum stigum, og tað er eisini ein stórur partur av okkara virksemi.

Á Virkisráðgeving eru 3,5 størv í løtuni, og tey hava útbúgvunar í búskapi, virkisbúskapi, fiskivinnubúskapi og marknaðarføring.

Uppfata tað ikki bindandi
Ein stórur spurningur í sambandi

- Vit eiga at seta krøv og eg hafi ikki varðgan av, at oljufelögini hava uppfatað færsku krövini sum serliga tyngjandi, sigur Símun Hammer á Virkisráðgeving i Runavík

Hammer ikki, at tað er rimiligt, at færtingar skulu hava framihjá rætt til at virka í oljuvinnuna framum onnur.

- Men eg haldi, at vit eiga at halda fast við kravið um, at færskar fyritókur skulu hava ein veruligan möguleika at koma uppi, har tær eru kappingarførar.

- Tað er skeiwt, at færskar fyritókur ikki skulu sleppa fram, bara tí at tær eru ókendar, og tí er tað rætt at krevja, at vit fáa ein veruligan möguleika, har vit eru kappingarførir, sigur stjóri i Virkisráðgeving.

Og hann hefur heldur onki ímóti, at vit halda fast við bryggjukantin.

nakað, sum tekur nógva tið og krevur nógva fyrireiking, tí tað skulu nógvar góðkenningar til og mangan eisini nógv trygdarskeið og onnur skeið til starvsfólk, eitt nú, tá ið ætlanin er at virka í frálandavinnuni.

- Eg haldi ikki, at færsku krövini eru órimilig. Hinvegin haldi eg, at tað hefur elvt til nógv stórra trupulleikar, at vit ikki hava havt eina tvískattaaftalu við Bretland. Eg havi avgjørt uppfatan av, at tað hefur verið ein nógv stórra trupulleiki.

- Men hon er so komin, so nú er tann forðingin burtur.

Sjálvur væntar Símun Hammer, at tey næstu árin fara vit at siggja eitt færskt vinnulív, sum er nógv virknari í oljuvinnuni, enn vit hava sæð higartil og umframta tær fyritókur, sum longu eru í oljuvinnuni, eru tað fleiri aðrar fyritókur, sum miðvist arbeiða fram í móti eini oljuvinnu.

- Veruleikin er, at hóast vit ikki hava nakra beinleiðis oljuvinnu í Føroyum, hefur virksemið, sum hefur verið rundan um okkum, latið eyguni upp hjá færskum fyritókum fyrir, at hetta er ein möguleiki, sum er verdur at taka við, sigur hann.

Skal vera eitt miðvist val

Men hvussu er so hjá færskum fyritókum at gerast partur í oljuvinnuni?

- Tað letur seg væl gera, og veruleikin er, at tað longu nú eru nögvar færskar fyritókur við í oljuvinnuni, staðfestir Símun Hammer.

Men hann leggur eisini dent á, at tað er ikki bara sum at siga tað.

- Skal ein færsk fyritóka upp í oljuvinnuna, skal tað vera eitt miðvist val, og tað skal leggjast ein miðvist ætlan og ein miðvísur málsetningur fyrir at koma uppi. Tað er ikki ein verkætlum, sum gongur yvir 14 dagar, men

Hinvegin heldur Símun

ENERGISING OUR FUTURE

At Chevron, we believe in safeguarding the environment while helping to meet Europe's energy needs. We strive for the highest standards of environmental protection and work with partners who share our values and are also committed to safeguarding the natural world for future generations.

This photograph is one of the winning entries from the Focus Environment Photographic Competition, sponsored and organised by Chevron.

We must not be afraid to impose demands

– We must not put ourselves in the position that we compromise safety and our environment, says Mr Jens Meinhard Rasmussen, CEO for Supply Service Leirvik

By Áki Bertholdsen
aki@sosialurin.fo

– We must not afraid to impose demands upon the oil companies, which are active and intend to work in Faroe waters, says Mr Rasmussen. Supply Service Leirvik, which operated supply vessels from the Norwegian company Havila for the 2001 exploration round: – Since then we have had the opportunity to monitor developments and last year we were able to buy vessels.

Since then they have contracted four new supply vessels, which are currently being built, but they have since sold one of the vessels to a Norwegian company. Delivery will be next year and in 2009. These are so-called PSV vessels, or Platform Supply Vessels.

– Competition is fierce in the oil industry and it takes some doing to gain a foothold. Our operational area is especially capital demanding, but we are quite fortunate to have a cooperation with Havila, who also have a share in Supply Service, and through them we have access to a large amount of knowledge in this field, and this is a great advantage. If we are to establish ourselves in an oil industry, we have to attain the same competence levels as our

rivals. If we are not competitive we can forget all about this industry.

Must not be afraid

On the other hand, Mr Rasmussen thinks that everything is entwined through the terms and conditions we impose upon the oil companies, and he is of the opinion that the Faroes must not be shy in this respect.

– Norwegians impose very stringent demands regarding safety and the protection of the environment and they demand knowledge of Nordic languages. It is possible to have the suspicion that some of the demands imposed are there to protect Norwegian interests and Norwegian industry, but at the end of the day it is the dollar everything revolves around. In any case we ought to impose very stringent demands regarding what equipment is permitted into Faroe waters to operate.

– We ought to do as the Norwegian do and set demands towards the oil companies so they are only permitted to use the newest and best vessels, which pollute our waters the least. We must at all costs prevent the old poor much polluting vessels where safety is compromised from entering our waters, just because we are afraid to set demands towards the oil companies, says Mr Rasmussen.

He says that in the Faroes we have strived to meet international demands. In Norway however, they impose their own demands for vessels working in the Norwegian oil industry and these are demands which come in addition to the international demands.

– They have for example a

Jens Meinhard Rasmussen, CEO, Supply Service Leirvik

special duty on NOX. This means that a maximum has been set for how much detrimental waste can come from a vessel. In practical terms, this means that a badly polluting vessel must pay so much in duties, that it is not competitive, thereby excluding itself from working in a Norwegian oil industry.

He says that in Norway this duty is applicable to all vessels, also fishing vessels, but he is doubtful if it would be correct of the Faroes to set such demands for all vessels, as he thinks that the current existing industry should receive some years to adapt.

– In the Faroes the oil industry is a new industry and therefore it is perfectly in order to impose duties on vessels from day one.

He is also of the opinion, that we could demand all vessels should be dual-hulled to prevent a pollution situation arising: – Dually-hulled vessels are considerable safer, regarding oil leakage compared to normal vessels, so this is also a demand we ought to consider, says the CEO for Supply Service.

In this connection he adds that the vessels currently being built by Supply Service must all the latest demands, and in essence in this respect of what is required

for our waters. They are also dually-hulled. Simultaneously they have greatly stressed the crew are given the very best conditions in order they thrive onboard. In this respect he means noise levels and amenities, e.g. internet connection in each cabin and so forth.

Correct balance

On the other hand Mr Rasmussen says we should be careful not to impose demands we cannot follow up on. One of the demands he has in mind is the demand of a Faroe quayside. He thinks that as long as we are exploring for oil, we can defend such a demand, but the question how do we follow up and control such a demand if an oil industry emerges.

– I am not saying that such a demand is right or wrong, I am just saying that we should think carefully so we do not create an inflexible system, by imposing demands which are difficult to administer. A demand stating that all must pass a Faroe quayside also demands a large workforce and it is a question of where this workforce is to come from, as the current situation stands.

He believes one way is to open

the doors for foreign labour, but having a large number of foreigners come to the Faroes, poses its own problems and challenges.

– It is quite clear however, that if we end in a situation where we impose demands we are not capable of administering we will not create growth and we will make no progress, says Mr Rasmussen.

– Instead we should make it interesting for the oil companies, by having a legislation which is flexible to administer, and make it easy to operate in the Faroes, instead of imposing demands upon the license holder, where we cannot control if these demands are being complied with or not.

He adds that he suspects that the Faroese are somewhat afraid of imposing demands upon the oil companies in case they scare them off.

– I think there is no reason for such an attitude, because as long as the oil price is where it currently is, the Faroes will definitely be interesting. The oil companies are used to countries in our part of the world setting demands, says Mr Rasmussen.

Vit mugu ikki vera bangin fyri at seta krøv

TRYGD OG UMHVØRVI
Eftir Áka Bertholdsen
aki@sosialurin.fo

Vit mugu ikki koma okkum sjálvum í ta stóðu, at vit ikki seta trygdina og umhvørvið í hásæti, sigur Jens Meinhard Rasmussen, stjóri í Supply Service Leirvík

- Vit mugu ikki vera bangin fyri at seta krøv til oljufelögini, sum virka og fara at virka i fóroyskum sjóøki.

Tað heldur Jens Meinhard Rasmussen, stjóri í Supply Service í Leirvík.

Supply Service hevði veitingarskip frá Havila við i leitingarumfarinum í 2001.

- Siðani tá hava vit fylgt gongdini, og i fjør fingu vit høvi at keypa skip.

Tey hava siðani gjort sáttmála um fýra nýbygd veitingarskip, men hava siðani selt tað eina skipið til Noregs. Sostatt hava tey trý skip eftir, sum øll eru í gerð og verða liðug næsta ár og í 2009.

Talan er um PSV skip, ella "Platform Supply Vessel".

- Tað er ógvuliga hørð kapping um at verða við i oljuvinnuni, og tað skal nýgv til at sleppa upp í part.

- Á okkara øki er tað serliga kapitalkrevjandi, men vit eru so heppin, at vit hava fingeð samstarv við Havila, sum eiger í Supply Service, og i gjøgnum teir hava vit

atgongd til ein ógvuliga stóra vitan á økinum, og tað er ein stóður fyrimunur.

- Men skulu vit fóta okkum í oljuvinnuni, er tað ein fortreyt, at vit koma upp á sama stóði, sum kappingarneytar okkara, ti eru vit ikki kappingarfør, kunnu vit gloyma alt um hesa vinnuna.

Mugu ikki vera bangin

Hinvegin heldur Jens Meinhard, at alt hetta er samantvinnað við tær treyrir, vit seta oljufelögum, og her heldur hann ikki, at fóroyingar eiga at smæðast burtur.

- Norðmenn seta oljufelögum stór krøv til trygg og til at verja umhvørvið og teir seta krøv til kunnleika til norðurlandskt mál.

- Tað ber til at hava ein illgruna um, at summi av hesum krøvum verða sett til oljufelögini fyri at verja norsk áhugamál og norsk vinnuliv, men i siðsta enda er tað krónur og oyru, alt snýr seg um.

Men undir øllum umstøðum heldur Jens Meinhard Rasmussen, at vit eiga at seta stór krøv til ta útgerð, sum kemur inn á fóroyskt øki at arbeida.

- Vit eiga at gera sum norðmenn og seta oljufelögum krøv, so at tey bara sleppa at brúka tey nýggjastu og bestu skipini, sum dálka minst, her um okkara leiðir. Vit eiga fyri alt i verðini at forða fyri, at tey vánaligu,

illa dálkandi skipini, har trygdn ikki er í topp, enda inni hjá okkum, bara tí at vit ikki tora at seta oljufelögum krøv.

Hann sigur, i Fóroyum hava vit lagt okkum eftir at lúka altjóða krøv.

Men i Noregi hava tey sett sini egnu krøv til skip, sum arbeida í norsku oljuvinnuni, og hetta eru krøv, sum koma omaná tey altjóða krøvini.

- Eitt nú hava tey serligt avgjald á NOX. Tað merkir, at hámark er sett fyri, hvussu nýgv skaðiligt urlát kann koma frá einum skipi. Í praksis merkir tað, at skip, sum dálka illa, skulu betala so nýgv í avgjaldi, at tey verða ikki kappingarfør, og sostatt forbjóðar tað seg sjálvat brúka tey í norsku oljuvinnuni.

Hann sigur, at i Noregi hava tey sett hetta avgjaldið á øll skip og sostatt eisini á fiskiskip. Men hann ivast í um tað er rætt af fóroyingum at seta slik krøv til øll skip, ti hann heldur, at vinnan, sum longu er, eיגur at fáa nökur ár at tillaga seg.

- Men i Fóroyum er oljuvinnan ein nýggj vinna, og sostatt ber væl til at seta avgjald á skipini í oljuvinnuni frá fyrsta degi.

Hann heldur eisini, at vit eisini kunnu krevja, at skipini skulu hava tveir skrokkar fyri at forða fyri dálking, skuldum tey verið fyri óhappi.

- Skip við tveimur skrokum eru rættilig nýgv tryggari, tá ið tað kemur til at leka olju, enn vanlig

skip, so tað er eisini eitt krav, vit eiga at umhugsa, sigur stjórin í Supply Service.

Í hesum sambandi leggur hann afturat, at skipini, sum Supply Service nú byggir, lúka øll tey nýggjastu krøvini um okkara leiðir og nakað væl afturat, og tey hava tveir skrokkar. Samstundis hava tey lagt stóran dent á, at manningin fær so góðar umstøður sum gjorligt fyri at fáa fólk at trívast umborð. Her hugsar hann bæði um larm og um hentleikar umborð við interneti á hvørjum kamari og so framvegis.

Rett javnvág

Hinvegin heldur Jens Meinhard tó, at vit eiga at vara okkum fyri at seta krøv, sum vit ikki megna at hava eftirlit við.

Eitt av krøvunum, hann hugsar um í hesum fóri, er kravíð um, at aðlar vørur skulu um fóroyiskan bryggjukant.

Hann heldur, at so leingi vit leita eftir olju, kann tað forvarast. Men spurningurin er, hvussu tað verður at hava eftirlit við einum slikum kravi, tá ið ein verulig oljuvinnna tekur seg upp.

- Eg sige hvørki at eitt slik krav er rætt ella skeiwt. Eg sige bara, at vit eiga at hugsa okkum um, so at vit ikki gera skipanina ov ósmidliga við at seta krøv, sum tað er torfært at hava eftirlit við.

- Eitt krav um, at alt skal ganga yvir fóroyiskan bryggjukant, krevur eisini stóra arbeidsmegi, og tað er ein spurningur, hvaðani hon skal koma, sum stóðan í samfelagnum er.

Hann heldur, at ein máti er sjálvandi at lata dyrnar upp fyri útléndskari arbeidsmegi, men at fáa útléndskari arbeidsmegi til eitt lítið samfelag, sum Fóroyar í stórum tali, forir eisini sinar avbjóðingar við sær.

- Men tað er heilt greitt, at enda vit i eini stóðu, har vit seta krøv, sum vit ikki klára at halda, skapa vit ikki vøkstur, og so koma vit ikki viðari, sigur Jens Meinhard Rasmussen.

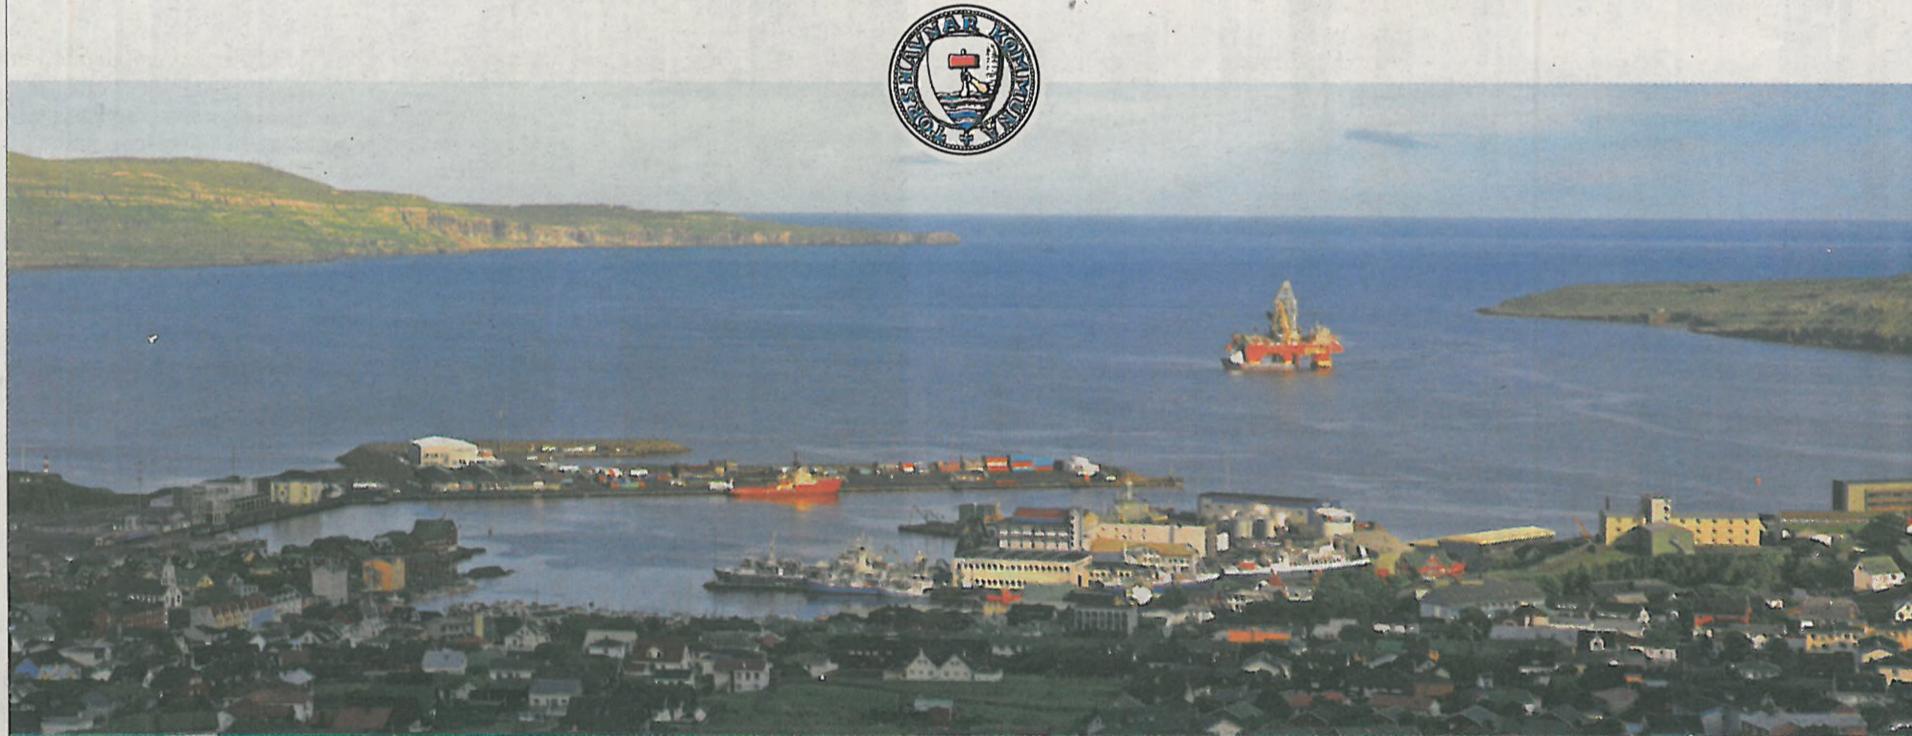

Har eiga vit heldur at gera tað áhugavert hjá oljufelögum við at hava eina lóggávu, sum er smidlig at umsita, so at tað verður lett at arbeida í Fóroyum, istaðin fyri at seta loyvishavarum krøv, har vit ikki fáa kannað eftir, hvussu tey vera hildin, sigur Jens Meinhard Rasmussen.

Hann sigur, at hann hevur varhuga av, at fóroyingar eru eitt sindur bangnir fyri at seta oljufelögum krøv av ótta fyri at styggja tey vekk.

- Men tað haldi eg ikki, at nökur orsok er til, ti so leingi oljuprisurin er á hesum stóðinum, eru Fóroyar avgjört áhugaverdar, og oljufelögini eru von við, at londini um okkara leiðir seta teimum krøv, sigur Jens Meinhard Rasmussen.

Conference city in the blue ocean

A city where visitors are still guests and where

guests are still welcomed as friends

STATOIL still positive

By Jan Müller, journalist
and Editor in Chief

The question is being asked 'why is Statoil remaining in the Faroes for hydrocarbon exploration after drilling two dry wells?' Statoil answers this on several fronts.

First it is a 30% partner in the exciting Rosebank-Lochnagar Field, discovered in late 2004 and currently undergoing a three well appraisal programme. As the latest press release indicates the field's third well (205/1-1) has just been tested and produced hydrocarbons at the rate of 6,000 barrels a day. In addition and importantly, the structure of the Rosebank-Lochnagar field is similar to large structures mapped by Statoil and its partners in the Faroes offshore. These constitute significant untested exploration potential in the Faroes.

In 2006 Statoil and its partners did drill the Brugdan prospect in the Faroes (well 6104/21-1); an analogous structure to Rosebank. The well was abandoned due to bottom-hole problems and time constraints before the well had tested all its objectives. Despite this, the well has given positive

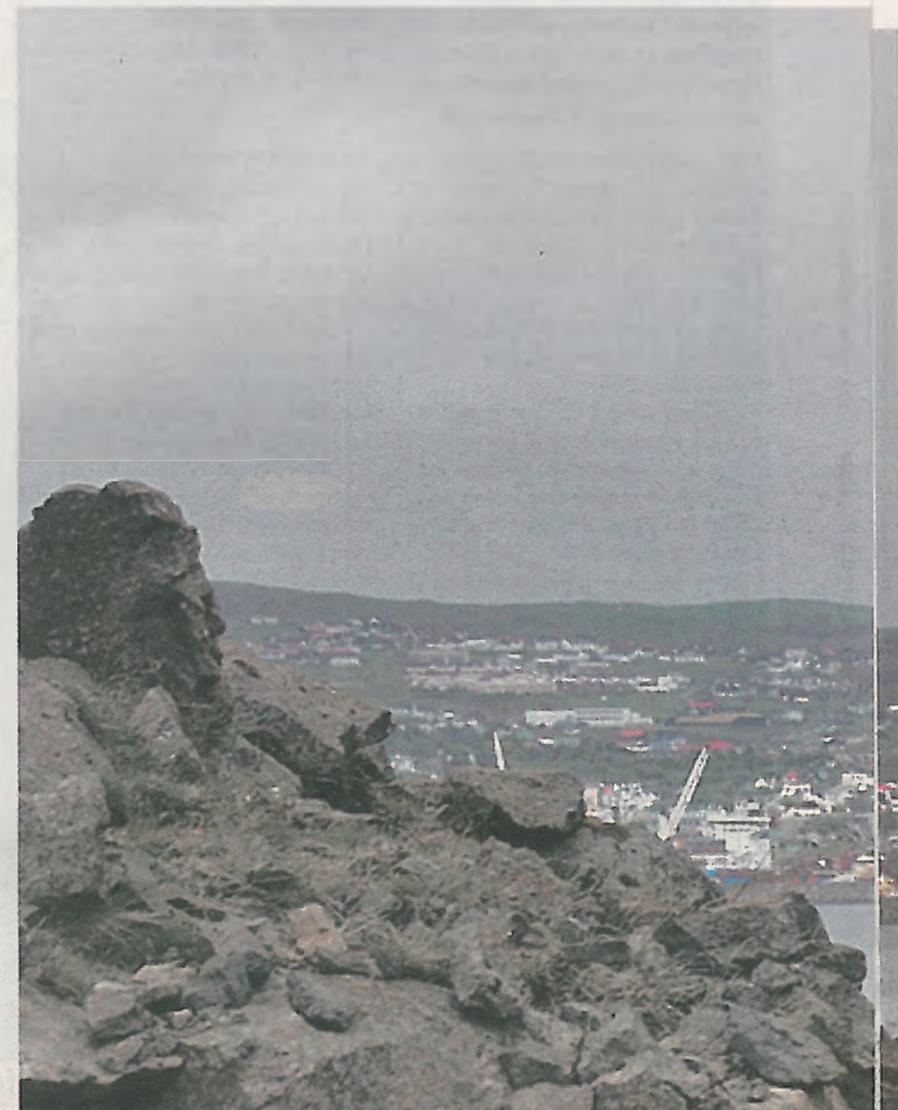

indications for future exploration. Not least the well drilled a significant thickness of basalt without problems. This was because Statoil invested heavily in early research with drilling companies to improve the technology and drilling speeds required to drill a large thickness of basalt. This research program involved large pieces of Faroe lava being collected and delivered to the USA for drill testing.

Of course the drilling of Brugdan with its thick basalt cover could not have been attempted without the great success Statoil and its partners have achieved in geophysical sub-basalt imaging. This has taken painstaking research over several years but now the results allow Statoil to explore other basalt covered areas for potential hydrocarbon bearing structures in the Faroes offshore with much greater confidence.

Offshore wells allow us to get pinpoint data at specific locations. However in the Faroes offshore, an unexplored frontier area, a large area remains more

speculative between these data points. To gain better insight to what these areas may contain, Statoil, Jardfeingi and other institutions are re-examining the geology of the Faroe Islands.

Finally, in early wells drilled in the Faroes offshore there were encountered small amounts of hydrocarbons. Together with radar, satellite and sea bed cores they suggest at depth an active hydrocarbon system. Therefore with only five wells drilled into the Faroes offshore area, four in a confined area close to the UK producing Foinaven-Schiehallion Fields, the exploration companies still need to investigate, research and understand the Faroes offshore hydrocarbon system. Where were hydrocarbons generated, when were they generated and where have they gone? Until we can answer these questions Statoil still will remain positive about future Faroes exploration. Further wells will be required and the drilling of the William Prospect by BP-Shell later this year will be another important milestone.

Rúni M. Hansen, Statoil Business Manager, Exploration Europe and Gareth Allinson, Exploration Manager

Transocean Rother drilling positive appraisal well at the border between UK and Faroes

for Faroes exploration

New oil company: Sagex Petroleum ASA

The three companies GeysirPetroleum, Sagex and Inoil have entered into an agreement to merge. The merged company will be named Sagex Petroleum ASA, and will be a strong, independent oil company working Norway, the North Sea and internationally. The company has licences in the UK, Denmark and Faroes, a number of projects in progress globally, access to

technology and the expertise of around 30 employees. GeysirPetroleum hf is an Icelandic oil company with licences in the UK, Denmark and Faroes. In the UK an oil discovery was made last year which will be appraised with three wells this summer. Oil production is scheduled for 2008/2009. The three operated licences in Denmark and the

Faroës are in an active exploration phase with acquisition and interpretation of 2D and 3D seismic. The company is registered on the OTC broker list.

Inoil AS commercialises projects and technology related to the oil and offshore industry. The company has two wholly owned subsidiaries:

Inoil Technology AS, which

develops applications based on web and geographical information systems comprising maps and databases on petroleum accumulations, prospects and field development modules.

Inoil Petroleum AS, which develops oil company projects presently with focus on Norway, North-Africa, Middle East and Latin America.

The shareholders of the company will be part of the staff of Sagex Petroleum ASA, thus securing a highly incentivised organisation.

Sagex AS is a leading Norwegian oil & gas exploration and production consultancy group established in 1999 with expertise in all technical and managerial disciplines relevant for an oil company. The organization has some 30 highly qualified professionals, a majority of whom have experience from Saga Petroleum ASA, working both the Norwegian Continental Shelf and internationally. Offices are located in Oslo and Stavanger.

The acquisition will be settled entirely in shares. The combined company will have a market capitalization of some NOK 700 mill, and will apply for listing on the new Oslo Axess before summer. First Securities has been financial advisor in connection with the transaction and has been engaged as manager for the

Dag O. Larsen og Terje Hagevang,
directors

planned listing process.

Sagex Petroleum ASA will be a strong, independent oil company with expertise in all aspects of exploration and production, both offshore and onshore. All necessary infrastructure will be in place from day one in order to develop the current portfolio and evaluate future opportunities. The organisation has long operational experience in Norway, the North Sea and internationally. The company's ambition is to secure several licences in the upcoming Norwegian licensing rounds. Pre-qualification as an operator is anticipated by the end of the year. The company will be headed by Terje Hagevang, now Managing Director of Sagex and former VP Exploration of Saga Petroleum and Amerada Hess.

The transaction is subject to due diligence and acceptance in the necessary company governing bodies.

Dual tax agreement opens doors for PAM Offshore

PAM Offshore is not just sitting around after the dual taxation agreement has been signed between the UK and the Faroes – “We have already done preliminary investigations”, says Mr Gunnar Mohr, CEO

By Hilmar Simonsen

PAM Offshore, which is a daughter company of Tórshavnar Skipasmiðja, has for a few years had people working abroad in the oil industry. To date most of them have been working within the Norwegian oil industry, where a dual tax agreement exists. The newly signed tax agreement with Great Britain, which hopefully will come into force on the 1st of January 2008, has most likely provided PAM Offshore with another leg to stand upon. Through this agreement, all questionable and doubtful taxation issues ought to be resolved, which should enable Faroese working in the UK and vice versa, only having to pay one tax according to the rules and regulations in the agreement.

This new situation has prompted Mr Mohr, the CEO at PAM Offshore, to turn his eyes towards the British mainland: - “This agreement opens up the option to send people to work in the UK also, and we are in the process of investigating the

Gunnar Mohr, CEO, PAM Offshore

possibilities”, says Mr Mohr. He will however not give any details, but says PAM Offshore has had contact with UK companies.

Shortage of labourers in the Faroes

There are already many Faroese skilled labourers working abroad, but there are not many foreign skilled labourers working in the Faroes. In several vocations there is a shortage of labourers in the Faroes, and therefore Mr Mohr says it is important that the door is also opened at the other end: - “We cannot barricade ourselves in our own little world”, he says.

The Faroe Minister for fiscal affairs, Mr Magni Laksafoss is in

complete agreement and says it is very important we open up our labour market to foreigners, but under structured and controlled conditions: - “There is a huge demand for labourers all over Europe and this is coming in the wake of the ever increasing wave of senior citizens (More and more are getting older, but fewer children are being born, Edit.) Therefore the shortage of labour is not just a problem for us, but all over Europe”, he points out.

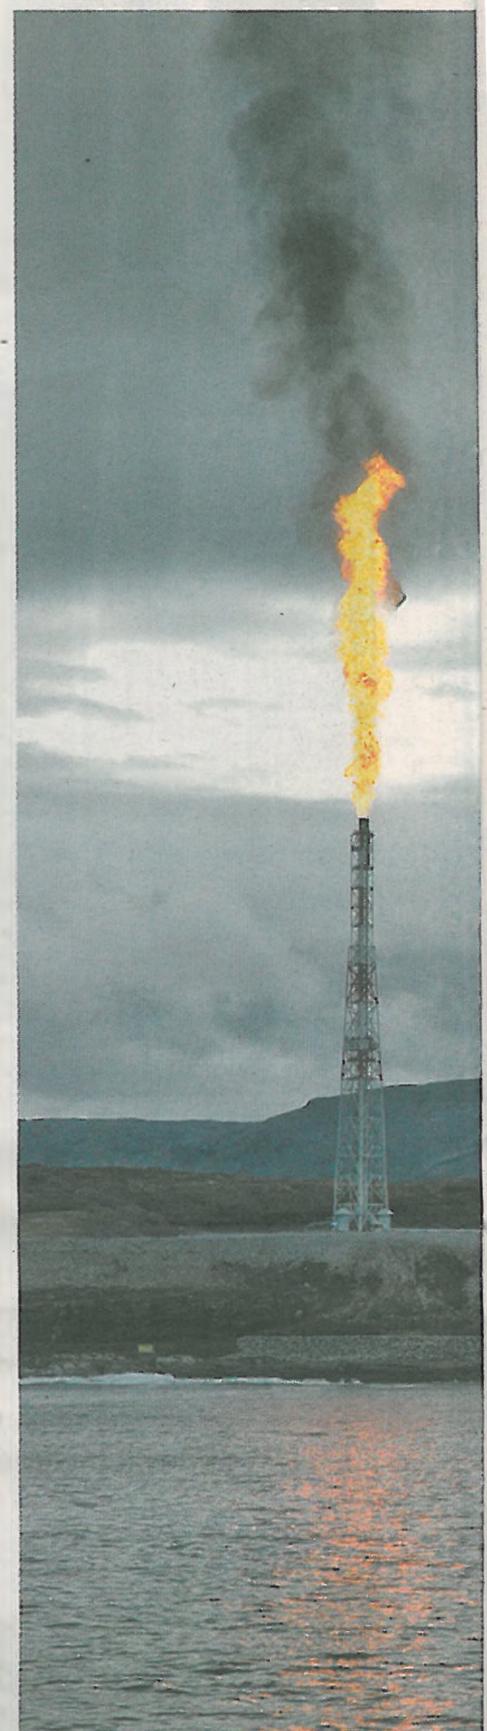

One thing is to open up the labour market, another thing is to see to it that you do not lose control: - “It is also important that the people support the idea of importing foreign labour to the Faroes”, says Mr Laksafoss.

No one made redundant at PAM Offshore:

Most skilled labourers working for PAM Offshore, have been working in the Norwegian oil industry, and have recently returned home for their summer holidays. App. 40 men, mainly electricians and welders, have been stationed in Egersund, where a floating barge has just been completed and delivered to Kashagan by the Caspian Sea.

After the work on the barge became prolonged, they succeeded in completing the work on the 23rd of August and could return home for their summer holidays, but several similar barges are to be constructed, and there are several indicators that the same men will be requested to continue working after the summer holidays. New plans are being drawn up, but it looks like work will begin again in September”, says Mr Mohr, CEO. He expects all the skilled labourers to retain their jobs as they are so well liked in Norway: - “We are trying to get as many as possible to go to Norway”, he assures us.

In northern Norway, at Melkova, PAM Offshore has had many people employed in connection with the development of the Snøhvit-field – now only four remain. This project is almost completed and the whole installation has been delivered, and subsequently people are being withdrawn from the area.

Samskattaavtala opnar dyr fyri PAM Offshore

PAM Offshore situr ikki sjóvarfallið av sær, nú tey skattligu ivamálini eru beind av vegnum millum Føroyar og Bretland. – Vit hava longu skattað dýpið har niðri, sigur Gunnar Mohr, stjóri

Felagið PAM Offshore, ið er dóttirfølag hjá Skipasmiðjuni, hevur í nökur ár hapt starvsfolk í arbeidi í oljuvinnu utanlands. Higartil hava flest teirra arbeit í norskarí oljuvinnu, har samskattaavtalan millum Norðurlond, sum Føroyar eru partur av, er galldandi. Men við nýggju samskattaavtaluni við Bretland, sum væntandi kemur í gildi 1. januar 2008, hevur PAM Offshore fingeð eitt nýtt bein at standa á. Við hesi avtalu skuldu allir skattligir ivaspurningar verið beindir av

vegnum, so at føroyingar sum fara til Bretlands at arbeiða, ella bretar sum koma hendarvegin at arbeiða, bert verða skattaðir einaferð samsvarandi teimum reglum, sum eru galldandi í sáttmálanum.

Hetta hevur fingeð Gunnar Mohr, stjóra í PAM Offshore, at venda eyguni móti bretská meginlandinum.

- Héndan avtalan opnar möguleikan at senda fólk tann vegin eisini at arbeiða, og vit eru í gongd við at kanna möguleikar, sigur Gunnar Mohr, sum tö ikki vil siga næri, hvørjar möguleikar tey kanna. Kortini avdúkar hann, at PAM Offshore hevur hapt samband við bretskar fyrítøkur.

Trot á arbeidsmegi í Føroyum
Tað eru longu nógvir føroyskir handverkarar, sum arbeiða utanlands, men í Føroyum eru ikki

nógvir útlendskir handverkarar. Í nógum vinnum er trott á arbeidsmegi her heima. Tí heldur Gunnar Mohr tað vera av stórum týdningi, at ”latið verður upp í hinum endanum eisini”, sum hann málber seg.

- Vit kunnu sjálvsgagt ikki byrgja okkum inni í einari ostaklokku, sigur Magni Laksafoss.

Magni Laksafoss, landsstýrismaður í figgjarmálum, er púra samdur í, at tað hevur stóran týdning at lata upp fyri útlendskari arbeidsmegi, men undir ”skipaðum viðurskiftum”, sum hann málber seg.

- Tað er stórun eftirstprungur eftir arbeidsmegi í öllum Evropa, og kemur hetta í kjalarvørrinum á vaksandi eldrabylgjini (alsamt fleiri gerast eldri, men færri börn verða född, blaðom.). Tí er mangul upp á arbeidskraft ikki bert ein trupulleiki

hjá okkum, men í öllum Evropa, visir hann á.

Men eitt er at lata arbeidsmarknaðin upp, annað er at syrgja fyri, at ein ikki missur tamarhaldið.

- Tað hevur eisini týdning, at fólköð tekur undir við, at fremmand arbeidsmegi kemur til Føroya, sigur Magni Laksafoss at enda.

Neyvan nøkt

Flestu hondverkararnir hjá PAM Offshore, sum hava starvast í norskarí oljuvinni, eru stutt síðani komnir heim til Føroya í summarfri. Einir 40 mans, flestu elektrikarar og nakrir sveisarar, hava starvast Egersund, har ein flótandi flaki (ein lektari) júst er gjordur liðugur og leveraður til Kashagan við Kaspiska Havð.

Eftir at arbeidið við lektaranum hevdi drigjat út, eydnaðist at fáa hetta liðugt tann 23. august, so at

Eli Lassen:

We will find oil within three to five years

PAM Offshore has had an active role in building the Snovit gasfield in Melkøya, Norway

-I am convinced that we will find oil and gas on the Faroese continental shelf/CS says Eli Lassen, manager of Atlantic Supply Base, abbreviated ASB. In his opinion, the oil should be transported to the oil terminal in Shetland instead of constructing a huge oil terminal in the Faroe Islands

Eli Lassen is manager of Atlantic Supply Base. They are quite optimistic in their views that oil will be extracted from the Faroese CS. They are preparing themselves for a possible oil industry in the Faroes.

Atlantic Supply Base in Runavik has been an active participant in the exploration drilling that have been made in the Faroes since 2001, i.e. 5 wells.

ASB was founded in 1999. Now, new challenges are ahead of us.

The Statoil explorations well "Brugdan" last year, unfortunately, failed to show any large quantity of oil and gas, but, anyhow, now we possess experience in drilling through basalt, and the basalt must have given many oil companies sleepless nights, but, nevertheless, Eli is convinced that the Oil Companies will find oil and gas on the Faroes CS.

We are making preparations for the BP exploration "William" well later this year and the challenges ahead of us, says Eli.

I would like to use Offshore Europe 2007 as an opportunity for me to meet Oil Companies that may wish to come to Faroe Island to drill and, of course, also those who work at a short distance from the Faroese/UK border. If Oil Company works on the Atlantic Frontier, Oil Companies will be able to save about 24 hours by sailing to ASB/Runavik as compared with other supply ports.

This is important, and at the same time, this means protecting the environment by saving fuel and less green house effect.

If the vessels need pot/drill water, bunkers, crew change, provisions, bulk, e.g. Barite, Bentonite and Cement, NaCl brine, KCL brine and mud, and other logistic tasks, we are able to offer all this at the Atlantic Supply Base, says Eli.

Skalafjord the best place

I am convinced myself that Skalafjord is the best place for a supply base.

- By nature, the Skalafjord is very good. When tenders were invited for the supply port, several ports offered their services, but the Oil Companies chose Runavik. This means that foreigners and people with knowledge of the oil industry chose Skalafjord.

- We have now six years of experience with supply base

service, and the Oil Companies who have done there exploration well's, have been well satisfied with our service, so I do not think there is any reason to move the supply base away from Runavik, says Eli Lassen.

It is very important to be able to offer good conditions when a rig owner sends a rig for repair in a short/long period of time.

The Oil Companies want sheltered water, and there is no doubt that Skalafjord is best suited for this.

Transport the oil to Shetland

I am of the opinion that oil and gas will be found on the Faroese CS within three to five years, and this is because Chevron has found good and light oil only 8 km from the Faroese/UK border.

The question is, of course, whether the oil found on our CS is of sufficiently good quality to extract, says Eli, who does not think that the oil should be extracted and taken to the Faroes.

It does not make sense to transport the oil to the Faroes and then export it directly to (main land) again. I think that the oil found on the Faroese CS should be connected to the pipes and infrastructure, which are on the Atlantic Frontier between the Faroes and Shetland. It would be much too expensive to make a terminal and lay new pipelines to our islands.

In Shetland, we find an oil terminal with all the equipment necessary; we can, sell the oil to them and take the proceeds home again.

If it later on appears that, there is oil to the North and the West of the Faroes we have another challenge, which we must solve then.

All the equipment for oil prospecting on the Faroese CS must, of course, cross Faroese quayside, as well as equipment for construction of a possible oil field.

We have many Faroese enterprises that are fit for being sub-contractors to the oil industry and they must, of course, have an opportunity to make an offer for various works on equal terms with others, says Eli Lassen finally.

Eli Lassen, CEO, Atlantic Supply Base

ur uppsøgn hjá PAM

mennirnir loksns kundu sleppa í summarfrí eftir drúgva arbeidiði. Men fleiri líknandi lektarar skulu gerast aftur, og tí er nógum sum talar fyrir, at somu menn kunnu halda fram at arbeida, tá gongd kemur á aftur verksmiðjuna í Egersund, sigur Gunnar Mohr stjóri.

- Nú verða nýggjar ætlanir lagdar, men sum tað sær út, so kemur gongd á aftur í september, sigur hann.

Hann væntar, at allir honverkararnir varðveita

arbeiðið, millum annað tí at teir eru væl umtóktir har yviri.

- Vit royna í öllum forum at fáa so nógvar inn sum möguligt, vissar hann fyrir.

Í Norðurnoreg, á Melkøya, har PAM Offshore hevur hatt nógvar mans í arbeidi í samþandi við útbyggingina av Snöhvit-leiðini, eru bert 4 mans eftir. Tann verkætlani er nærum liðug, installationin er tikið í bruk, og tí verður avmannað haðani.

Marketing Faroese business at offshore

Faroese companies have participated in Offshore Europe since 1995. This year, ten companies are represented at the Faroese national pavilion at Offshore Europe

By SamVit
The Faroese Oil Industries Association

– Faroe Islands Enterprise coordinates the national pavilion at Offshore Europe in close cooperation with the Faroese Oil Industries Association. The companies represented at Offshore Europe this year are Atlantic Airways, Smyril Blue Water, Beras, PAM Offshore Service, Thor Offshore, Atlantic Supply Base, FT International, Virkisráðgeving, Vagar Airport and the Port of Runavík.

To many of the companies, Offshore Europe is among the most important events of the year, and a great opportunity for them to showcase their services. Many of them have participated in the exhibition earlier, and are

already competitive actors on foreign markets - building an area of expertise, which will be of great importance for a potential future oil industry to flourish.

There is a lot of excitement in the air this autumn with the drilling of the William well in October and the third licensing round being prepared, and probably announced later this year. "We hope that the increased activity will attract many visitors to the Faroese national pavilion," is the message from the organisers.

About SamVit - Faroe Islands Enterprise

SamVit - Faroe Islands Enterprise is the name of the two merged public organisations the Faroe Islands Tourist Board and the Faroe Islands Trade Council, which merged at year-end 2006. SamVit – Faroe Islands Enterprise (FIE) is to carry out the chosen national policy regarding trade and industry. Among the main responsibility of the organization is to encourage innovation and enterprise, to advance and develop Faroese trade and industry and to market

SamVit has its office in the heart of Tórshavn

Faroese products and services as well as the Faroe Islands themselves as a business and investment opportunity.

FIE coordinates the participation of Faroese companies at international trade fairs, and has organised national pavilions for a cross-section of industries at major events in cities such as Brussels, Glasgow, Stavanger and Vigo.

FIE assists businesses outside the Faroe Islands with information about the country's business

environment. FIE's official website [HYPERLINK "http://www.trade.fo"](http://www.trade.fo) contains an Export Directory where Faroese companies present their products and services. The directory is easy to use with a practical on-line search function on companies, their products and services.

About Faroese Oil Industries Ass.

The Faroese Oil Industry

Association (FOIA) works to give Faroese companies opportunities in this new industry in the Faroes. The aim is to increase the Faroese companies' competences, and to develop and improve their skills.

The Faroese Oil Industries Association was established in April 2001 and has currently 39 members. Only companies can become members. The purpose of the association is:

"...to gather companies, that work within the oil-industry, to carry out matters of joint interest and to work for the members' interest."

Faroese Oil Industry Association communicates with the oil-companies, authorities and the political society. Among other things, the Association - together with the oil-operators in Faroese territory - has developed a standard contract for minor onshore business. The forerunner of Faroese Oil Industry Association – an oil work group in Faroese Employers' Association – was involved with the work of the oil-legislation.

Guardians of safety

Thor in Nordic mythology was the god of thunder, a very strong and powerful god who was also the guardian of the gods.

Thor was established 10 August 1994 and now operates 23 vessels. In the past the company was mainly active in the fishing industry operating gillnetters/longliners. However since 1997 it has become increasingly active in supplying chase/guard vessels for the off-shore oil industry and cable/pipeline-laying operations and has gained a lot of its expertise and experience by working for some of the world's largest seismic companies.

Thor prides itself on being an innovative, trustworthy and creative company. The company has an ambitious quality policy. All work is carried out according to a high standard Quality, Safety and Environmental Manual.

Thor's policy of looking after its human resources has resulted in a low turnover of employees. Therefore the company has built up a workforce, on land and sea, of well-motivated,

experienced and flexible people who are fluent in Scandinavian and English.

Thor Ltd is an experienced company that you can rely on for work around the Faroe Islands and all over the world. Do not hesitate to contact us whatever your requirements are.

Stephanie Røn

Thor continues to grow

The shipping company Thor from the village of Hósvík has no less than 24 vessels under their wings. Of these 16 are vessels for the offshore industry and 8 are fishing vessels. A brand new seismic supply vessel is on its way to the Thor fleet and next year another sister vessel will join. Up to 700 people work for Thor and it is to be counted as one of the largest companies in the Faroes

By Hilmar Simonsen

The two brothers, Mr Hans Andrias Joensen and Mr Gunnbjørn Joensen, are holding their own. Since they founded the company Thor in 1994, they have continually expanded their activities. Activity began on a small scale in 1990, and up to 1997 mainly encompassed fishing vessels. Today, their activities encompass the offshore industry, fishing, and cable and pipe-laying. They have established themselves to such an extent within the offshore industry, that they deliver services to the world's largest seismic companies.

Mr Gunnbjørn Joensen admits the pace has been fierce since

Hans Andreas Joensen, CEO of Thor and part of his staff

they founded the company thirteen years ago, but this is due not least to the many good staff they have acquired, he adds.

Two new seismic supply vessels

The Thor fleet today counts 24 vessels, but the fairytale does not stop here, because in mid-November 2007, the new seismic supply vessel "Thor Alpha" is set to join the fleet and in the autumn of next year a sister vessel, which has not yet been named, will join.

The hull of the Thor Alpha was

floated from the Skála shipyard dock on the 21 of July 2007 and is currently being completed. It should be ready to begin operations by mid-November, after it has been to the Danish town of Hirtshals to sandblasted and painted.

The Thor Alpha is 55 metres long and will cost in the region of DKK 76 million. The sister vessel, which is expected to be ready in mid-September next year is expected to cost app. DKK 80 million. Mr Gunnbjørn Joensen says the Thor Alpha will set course directly for Mexico when it is ready. The company is

providing offshore services all over the world, so there is nothing strange in this situation.

To Aberdeen to meet friends

Asked what errands they have at Offshore Europe 2007, Mr Joensen says they first and foremost go to meet cooperation partners and visit old friends: - "We will exhibit at the Faroe joint stand, hold meetings and ply our cooperation partners", he says.

It is rare to sign new contracts at a conference, but a conference

can lay the basis for coming activities.

Thor has become a provider of services in its field and according to Mr Joensen the company has enough tasks for all its supply vessels.

It is important for a company like Thor to participate at such conferences as the company is active globally with most of its activities outside of the Faroes.

At the moment, app. 500 people are employed by the Thor group.

Thor heldur á at vaksa

One of the Thor vessels in the beautiful village of Hósvík

Reiðarið Thor í Hósvík hevur ikki færri enn 24 skip undir sínum veingjabreiði. Av hesum eru 16 frálandaskip og 8 fiskifær. Eitt nýtt seismikkveitingarskip er á veg í flotan, og í næsta ár kemur eitt annað sama slag. Upp í 700 fólk starvast hjá Thor, sum er millum störstu fyrítakur í Føroyum

Teir halda tórn, brøðurnir Hans Andrias og Gunnbjørn Joensen í Hósvík.

Síðani teir stovnaðu felagið Thor i 1994, hava teir áhaldandi vaksið um virksemi. Virksemið byrjaði í ti smáa í 1990 og umfataði fram til 1997 einamest fiskiskap. Í dag umfatar virksemið frálandavinnu, fiskiskap, kaðal- og rørleggingarvirksemi. Teir hava fangið fótin so mikil fastan innan frálandavinnu, at teir í dag veita tænastur til heimsins störstu seismikkfelög.

Gunnbjørn Joensen, annar av stjórunum í Thor, ásannar, at tað hefur gingið við rúkandi ferð, síðani felagið varð stovnað fyrir 13 árum

síðani. Men hetta skyldast ikki minst, at teir hava nögv góð starvsfólk afturat sær, leggur hann afturat.

Tvey nýggj seismikkveitingarskip Samlaði flotin hjá Thor er í dag 24 skip, harav 16 eru frálandaskip og 8 eru fiskifær. Men ævintýrið steðgar ikki her, tí hávan november í ár kemur nýggja seismikkveitingarskipið Thor Alpha inn í flotan, og á heysti næsta ár kemur eitt seismikkveitingarskip afturat, sum er systirskip til Thor Alpha. Hetta seinna skipið er ikki nýggvið enn.

Skrokkurin til Thor Alpha fór av bakkastokki á Skála Skipasmíðju tann 21 juli í ár, og verður í lötnu bygt liðugt. Tað verður klárt at fara í vinnu um hávan november, eftir at tað hefur verið í Hirtshals og er blivið sandblást og málæð. Thor Alpha er 55 metrar langt og kemur at kosta umleið 76 mió. krónur (DKK). Systirskipið, sum eftir ætlun skal vera liðugt hávan september næsta ár, kemur at kosta góðar 80 mió. krónur (DKK).

Gunnbjørn sigur, at Thor Alpha fer beina kós til Meksiko at gera

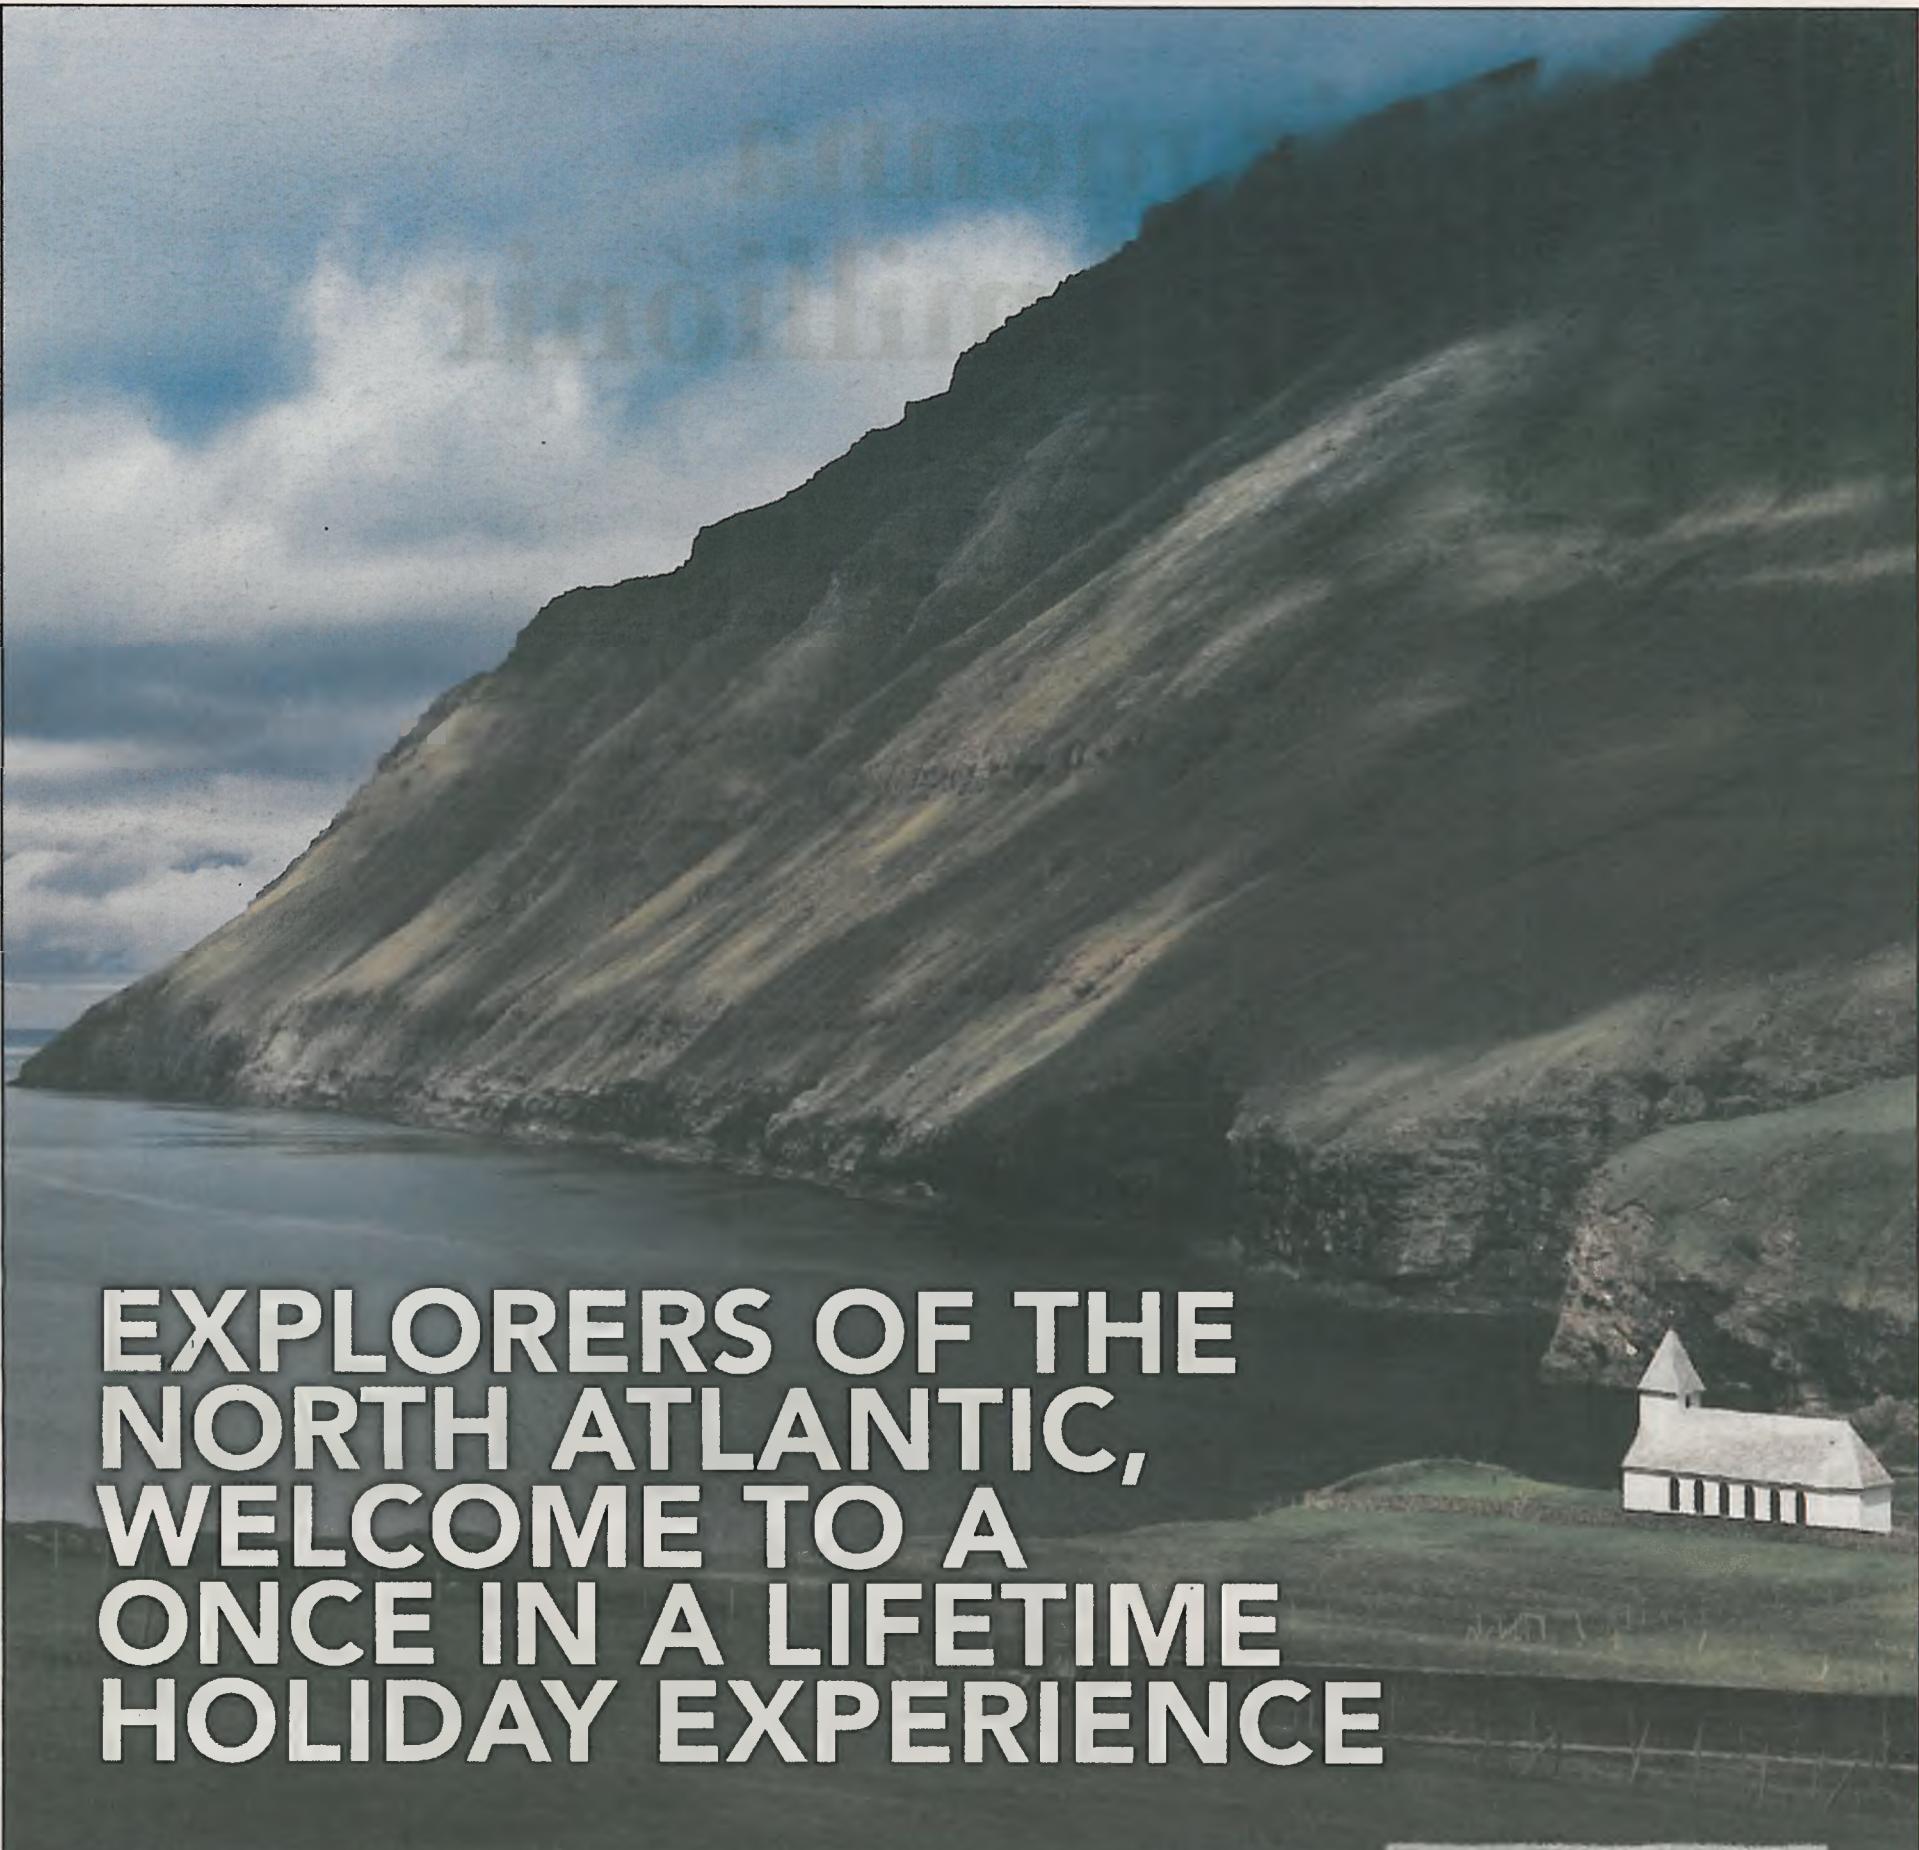

frálandatænastur, tá tað er liðugt. Felagið ger longu tænastur í frálandavinnuni kring allan knøttin, og tí gr einken ókent í hesum sum so.

Til Aberdeen at rökja vinarbond Spurdur hvørji örindi teir hava á oljáráðstevnum í Aberdeen, sigur Gunnbjørn Joensen, at teir fyrst og fremst fara at hitta samstarvsfelagar og rökja gomul vinarbond.

- Vit fara at vísa fram á fóroyiska felagsbásinum, halda fundir, og annars halda tey samstórv og bond við lika, sum vit hava, sigur hann.

Tað er sjáldan, at ein undirskrivar nýggjar sáttmálar á einari ráðstevnu, men ráðstevnan kann vera við til at leggja lunnar undir komandi virksemi. Thor er eftirhondini vorðin ein kendur veitari á sínum øki, og sambært Gunnbjørni, so hefur felagið í lötnu nóg mikil av uppgávum til øll veitingarskipini.

Tað hefur týdning fyrir eitt felag sum Thor at lutta á sílum ráðstevnum, tí felagið virkar sera globalt og hefur största partin av sínum uppgávum utan fyrir Føroyar. Tað starvast í lötnu umleið 500 fólk í samtakinum hjá Thor.

EXPLORERS OF THE NORTH ATLANTIC, WELCOME TO A ONCE IN A LIFETIME HOLIDAY EXPERIENCE

Have you ever been there? Have you ever stood in the midst of the harsh and fascinating landscapes of Iceland or the Faroe Islands, overwhelmed by your impressions? Have you explored these rugged islands and experienced sceneries that you thought were only available on photographs? Have you been thrilled by the magic light of the midnight sun? No queues of tourists, only serious travellers in search of a very special experience?

Smyril Line enables you to experience Iceland and the Faroe Islands at their very best – especially if you take your own car with you. Drive as you like and see fantastic glaciers, bathe in therapeutic thermal springs and see the fascinating geysers. See the petrified lava around the volcanoes and ford the rivers. Ports of departure on mainland Europe: Scrabster, Scotland; Hanstholm, Denmark and Bergen, Norway.

Get ready for a unique experience that you will remember for the rest of your life!

Oljuvónir menna Føroyar fyrí milliónir

Hóast tað verður rópt "stuðul til vinnuliga færleikamenning", so er talan ikki um nakra menningarhjálp. Talan er um eitt gjald afturfyri at sleppa at troyta okkara náttúrutilfeingi. Við teimum báðum loyvisumførunum higartil er henda upphæddin blivin til 107,5 mió. krónur

VINNULIG FÆRLEIKAMENNING

Eftir Hilmar Simonsen

Í samband fyrra og annað útbjöðingarumfar í færskum øki bundu oljufelögini seg til at gjálda ávisar peningaupphæddir til vinnuliga færleikamenning. Við fyrra útbjöðingarumfar i 2000 var samlaða upphæddin ásett til 85 mió. krónur, galdandi fyri loyvir fram til 2006. Við aðru loyvisrundi i 2005 var ein upphædd á 14 mió. krónur ásett.

Nøkur av fyrru loyvunum vórðu seinni longd fram til 2009, og tá bundu viðkomandi oljufelög seg til at gjálda eina eykaupphædd á góðar 8 mió. krónur. Samlaða skyldan hjá oljufelögnum til vinnuliga færleikamenning var við árslok 2006 sostatt komin upp á 107,5 mió. krónur, vísi ein uppgerð hjá Jarðfeingi, sum Sosialurin hevur fngið innlit í.

Petur Joensen, deildarleiðari á Jarðfeingi, vísi á, at meginparturin av hesum peningi longu er játtáður til ymsar verkætlani, hóast sumt er fallið aftur orsakað av, at verkætlani ikki eru gjørðar til endans. Eingin dagförd uppgerð er yvir einstakar játtanir,

Kirkjutorn og oljutorn hvort um annað nýggja ímyndin av Havnini

men eitt sindur av peningi er framvegis tókur frá útbjöðingarumførunum.

- Tann upphæddin fellur ikki aftur til oljufelögini, men verður játtáð fyrr ella seinni, sigur Petur Joensen.

Golf til vælhavandi ferðafolk

Oljufelögini umsita sjálv hesar

játtanirnar, og tey avgera sjálv, hvørjar verkætlani tey vilja stuðla. Einasta treytin frá færøsku myndugleikunum er, at peningurin vérður játtáður so ella so.

Til dømis er nógur peningur játtáður til gransking, upplæring, góðskustýring, leiðslumenning, og ymsar útgávur og framleiðslur. Harumframt er stuðul eisini latin til ymsar útbúgvunar.

sum heima. Talan hevur bæði verið um bókligar og praktiskar útbúgvunar.

Til stuttleikar kann nevnast, at tutlað var nógvi í krókunum, tá ein golf-stjóri fekk 200.000 krónur í lumman. Men hetta var ikki tað bera fjant og fjas, vísi Petur Joensen á:

- Ætlanin hjá fyrireikarunum var at kanna, um tað ber til at skipa fyri golfspæli í Føroyum, sum eitt tilboð til vælhavandi ferðafolk. Tí var hesin stuðul givin sum menning í ferðavinnuhøpi, sigur hann.

Ur stóru rúgvuni av verkætlannum, útbúgvungum og persónum, sum hava fngið stuðul til vinnuliga færleikamenning kunnu nevnast: fjarlestur á Robert Gordon University í Aberdeen, ymsar verkætlani á Fróðskaparsetrinum, vindorkukanningar hjá SEV, kanningar i samband við alduorku, orðabøkur (Sprotin), Óli Breckmann (bókaútgáva um skatt), og mangt mangt annað. Ymsu oljufelögini, ella samtök, hava stuðlað ymsum endamálum hvor i sínum lagi.

Færleikapeningur hevur eisini ført til, at føroyingar nú eru farnir at læra aðrar oljutóðir at leita eftir olju. KT-fyrítókan Simprentis hevur nevniliða

fngið færleikapening til at menna oljuforritið OilSim, sum nú verður brukt til undirvísing í nýgvum heimsins londum.

Gjald fyri at troyta náttúrutilfeingi

Petur Joensen heldur, at orðið "færleikamenning" kann misfatast, tí i veruleikanum er talan ikki um menningarhjálp. Hann metir ei heldur, at útlendsku fyrítokurnar meta Føroyar sum nakað menningarland.

- Hugsanin við stuðuli til færleikamenning er, at tað verður hildið rímuligt, at útlendskar fyrítokur, sum koma higar at troyta okkara náttúrutilfeingi, rinda eitt gjald afturfyri, sigur hann.

Hann vísi á, at útlendingar sum koma higar ofta eru sera hugtikni av, hvussu væl samfelagið er útbygt, hóast Føroyar ligga so forfjonaðar mitt úti i Atlantshavinum.

Fakta

Ein uppgerð pr. 31. desember 2005 vísi, at játtáðar voru 81 mió. krónur til færleikamenning, meðan 27 mió. krónur voru eftir. Tolini eru ein samanlegging fra nyggjasta yvirlitnum yvir einstakar játtanir.

Fyrsta loyvisrunda (status pr. 31.12.2005):

Øki	Upphædd (mió. krónur)
Vinnulig endamál	54
Útbúgvunar	25
Önnur endamál	2
Tilsamans	81
Samlað skylda	94 mió. krónur
Eftir at bruða	13 mió. krónur

Önnur loyvisrunda (status pr. 31.12.2005):

	Upphædd (mió. krónur)
Brukt	0
Samlað skylda	14 mió. krónur
Eftir at bruða	14 mió. krónur

Lengst skal afturat at pr. 31. desember 2006 voru 10 mió. krónur blivnar játtáðar afturat. Sostatt voru tilsamans 17 mió. krónur eftir við árslok 2006.

St. J. J. Hansen

We know the drill

Statoil is building a world-class international oil and gas company. This requires that we are among the absolute front runners in health, safety and the environment (HSE). No other avenue is open.

Statoil is one of the world's most environmentally efficient producers and transporters of oil and gas. We aim to conduct our business without causing harm to people or the environment. With our value base as a starting point, we will create value for our owners and the communities in which we work through profitable and safe operations.

 STATOIL

Faroe Petroleum framleiðir nú kolvetni

Nú dálka vit fingrarnar

Vit eru farin undir at framleiða kolvetni úr Minke Main kelduni, sum er ein av fleiri kolvettiskeldum hjá felagnum í Norðsjónum. Sostatt er Faroe Petroleum farið frá at vera eitt leitifelag til eisini at vera eitt altjóða, færøyskt felag, ið framleiðir olju og gass. Nýggja framleiðslan gevur stórt figgjartíkt íkast og góðar vakstrarmöguleikar.

Faroe Petroleum plc er skrásett á virðisbrævamarknaðinum í London.

www.faroe-petroleum.com

Felagið hevur skrivstovur í Tórshavn, Aberdeen og Stavanger. Í løtuni hava vit 34 loyvir til leiting, útbygging og framleiðslu í færøyskum, norskum, bretskum og hollandskum øki. Faroe Petroleum plc er móðurfelag hjá fyrsta færøyska oljufelagnum, Føroya Kolvetni p/f, sum varð sett á stovn í 1998.

Øll kunnu keypa partabrév í Faroe Petroleum. Keyp partabrévini í færøysku peningastovnunum.

Føroya Kolvetni
Altjóða færøyskt oljufelag

Teinurin til Runavíkar nógv styttri enn til Aberdeen

- Taka vit kanningarbrunnarnar hjá Chevron, sum eru funnir í bretskum øki beint hinumegin markið, er fjarstøðan millum øki og Aberdeen tilsamans 240 fjórðingar – og bert 97 fjórðingar millum leiðina og Runavík. Hetta merkir, at teinurin av økinum og til Aberdeen er 150 fjórðingar longri hvønn vegin, enn hann er av økinum og til Runavíkar, sigur Eli Lassen, sum er stjóri á Atlantic Supply Base

OFFSHORE EUROPE
Eftir Vilmund Jacobsen
vilmund@sosialurin.fo

Eli Lassen fer at umboða Atlantic Supply Base á oljuráðstevnuni, sum verður í Aberdeen 4. og 5. september.

Hann hefur verið í fóustum starvi hjá felagnum, sum stendur aftanfyri virksemið á havnalagnum hjá Runavíkar havn, síðan 25. apríl í fjør.

Seinni er hann eisini vorðin nevndarlimur í ASB, sum felagið verður rópt.

Hann riggar til

Eli Lassen sigur, at hóast einki leitingarvirksemi hefur verið á færøyskar landgrunninum í seinastuni, hefur hann havt til uppgávu eitt nū at viðlikahalda útbúnaðin hjá ASB, samskifta við fólk og at luttaka i skeiðvirk-

semi av ymiskum slagi. Skeiðvirksemi er ein liður í færleikamenningini.

- Nú er so henda boringin eftir, ið BP sum høvuðsfelag fer undir á landgrunninum seinni í heyst ella tíðliga í vetur. Enn vita vit ikki rættiliga, nær leitipallurin verður leysur hinumegin markið og verður klárur at seta borin í færøysku undirgrundina.

Eli sigur seg hava varhugan av, at BP og tey felög, sum eru við í samtakinum hesaferð, eru spent eftir at sleppa í gongd – ikki minst, nú olja er funnin í bretskum øki beint hinumegin markið.

- Sjálvandi gevur hetta ein ávisan spenning og eitt ávist bjartskygni, bæði hjá teimum, sum eiga hetta leitiloyvi og hjá okkum, ið standa aftanfyri tænastuna og virksemið uppi á landi.

Eingin útsetning

Hann heldur eisini, at tað týðir upp á ein stóran áhuga fyrir hesi leitiboring, at BP ikki útsetir boringina, nú heystið og veturni stunda til.

- Hinvegin hefur hesin pallurin borað á atlantsmótinum í eitt heilt ár, og tá hann var eagnaður til hetta virksemi síðsta veturn, er hann sjálvandi eisini eagnaður í veturn, sigur Eli.

Hann víssir á, at tá ið virksemið á Atlantic Supply Base nú av álvara verður tikið uppaftur, er altið nógv at takast við, serliga í byrjanini.

- Síðan stabiliserar virksemið seg aftur, tá ið gongd er komin á, leggur hann aftrat.

Tað er ógjørligt at siga, hvussu langa tíð tað fer at taka at bora hetta seinasta holið í hesum umfari, men Eli væntar, at tíðin man fara at liggja um einar triggjar mánaðir ella stívliga tað.

Eli Lassen, stjóri á Atlantic Supply Base, sigur, at teir eru um at verða klárir til oljuboringina, men enn restar tó okkurt í, sum skal fáast upp á pláss. – Vit verða til reiðar í góðari tíð, sigur hann

Mynd: Vilmund Jacobsen

- Hetta veldst tó alt um, hvussu tað fer at gangast at bora, sigur hann.

Bulkskip á Runavík

Leygardagin var niðurlendska bulkskipið Ritske á Runavík við tilfari, sum skal nýtast til borivirksemið. Skipið hevði tilsamans 1200 tons

tons av sementi, barite og bentonite, ið verða brúkt, tá borað verður. Niggju av silounum á ASB eru til turrtarf og fimm tangar eru til flótandi tilfar.

Eli Lassen sigur, at teir eru um at verða klárir á basanum til

oljuboringina, men enn restar tó okkurt í, sum teir skulu fáa upp á pláss.

Hann vissar kortini um, at Atlantic Supply Base í góðari tíð stendur til reiðar við øllum tí, sum skal til, tá tíðin kemur.

- Nú oljuráðstevna verður í Aberdeen, verið eg burtur í 14 dagar, harav eg í eina viku fari at vitja BP í sambandi við komandi leitiboringina, sigur Eli.

Føroyar áhugaverdar

Stjórin á Atlantic Supply Base heldur avgjørt, at geografiska plaseringin hjá okkum er sera áhugaverd, nú oljuækini nærkast

okkum sunnanefstir.

- Taka vit kanningarbrunnarnar hjá Chevron, sum eru funnir í bretskum øki beint hinumegin markið, er fjarstøðan millum øki og Aberdeen tilsamans 240 fjórðingar – og bert 97 fjórðingar millum leiðina og Runavík. Hetta merkir, at teinurin av økinum og til Aberdeen er út við 150 fjórðingar longri hvønn vegin, enn hann er av leiðini og til Runavíkar. Fram og aftur er talan soleiðis um smáar 300 fjórðingar á muni, og tað er ikki litið, sigur Eli.

Hann víssir á, at skulu vit gerast veitarar til oljuvirksemi á hesum leiðum, er neyðugt, at ein partur av rávøruni kemur til Føroyar fyrst, men hetta skuldi ikki verið nakar trupulleiki, nú so góðir flutningsmøguleikar eru millum londini.

- Hinvegin hava vit bæði vatn, olju, proviant, útgerð og folk at bjóða fram, sum eru tek her heima, leggur hann aftrat.

Stórir möguleikar

Hann víssir á, at timalønin er hægri í Føroyum enn í Bretlandi, men hinvegin er nógur peningur at spara í olju og tið, um veitingarnar og tænasturnar koma úr Føroyum heldur enn úr Aberdeen.

- Jú, eg síggi avgjørt stórar möguleikar í hesum, nú virksemi flytir seg nærrí okkum, sigur Eli Lassen, stjóri á Atlantic Supply Base.

Leygardagin var niðurlendska bulkskipið Ritske á Runavík við tilfari, sum skal nýtast til borivirksemið. Skipið hevði tilsamans 1200 tons av sementi, barite og bentonite

Føroyar kunnu koma í

OFFSHORE EUROPE

Vilmund Jacobsen
vilmund@sosialurin.fo

- Føroyar kunnu koma at sita í eini lykla-stöðu, nú olju-og frálandavirksemi flytir seg norðureftir. Eg vænti, at vit við tíðini fara at merkja hetta við veksandi og stöðugari aktiviteti innan flutning, útgerð og tænastu. Vit eiga at siggja positivt upp á hesa gongd, sigur havnanevndarformaðurin í Runavíkar kommuni, Klæmint Ósterø

- Eg hafi ongantið ivast i, at olja í rakstrarverdum nøgdum fer at verða funnin í færiskum øki. Spurningurin er bara, nær tað verður - og ikki um tað verður. Vit vita longu nú, at aktivt kolvetni er í færisku undirgrundini, sigur Klæmint Ósterø, sum er maskinverkfröðingur við sergrein í flótandi boripallum

Mynd: Vilmund Jacobsen

Runavíkar kommuna verður við á færøyska felagsbásinum á oljuráðstevnuni í Aberdeen, 4. og 5. september. Tað verður stjórin fyri Runavíkar havn, Jón Rosenblad, sum fer at umboða kommununa á básinum.

Klæmint Ósterø er formaður í havnanevndini hjá Runavíkar kommuni.

Sum grundútbúgving er hann maskinverkfröðingur, men hann hevur eisini lisid tað, sum á fakmáli verður rópt offshore konstruksiún við serfröði innan flótandi boripallar.

Undir landi

- Vit plaga at vera betri mannaðir á slíkum oljuráðstevnum, nú oljuútgerðarhavnin og Atlantic Supply Base liggur í okkara kommuni. Vit plaga soleiðis eisini at hava umboð fyri "politiska systemið" við. Men tað er dýrt at senda fólk avstað, og spurningurin er, um tað er neydugt hesaferð, nú flestu avtalur í sambandi við komandi leitiboringina eru komnar upp á pláss.

Hann sigur, at ein hópur av fólk, bæði framsýnarum og vitjandi, eru í Aberdeen, meðan oljuráðstevnan er, og hetta ger, at torført er at fáa innivist á hotelli.

Harafrat kemur, at hotellini seta

prísirnar upp í gjøgnum, tá eftirspurningurin eftir kómrum er so stórrur.

- Aberdeen og Stavanger skiftast um at skipa fyri hesi ráðstevnu, og eg haldi, at hjá okkum føroyingum er við árunum meira at fara eftir í Stavanger enn í Aberdeen. Eg haldi, at tað er lættari hjá okkum at fara til Stavanger og fáa nakað burtur úr, enn tað er at fara til Aberdeen. Felögini í Noregi liggja okkum nærrí enn tey í Bretlandi, eisini Statoil, og nú tey áhugaverdastu økini flyta seg norðureftir, talar hetta eisini fyri, at áhugin flytir seg tann vegin.

Klæmint Ósterø víser á, at eisini Shell hevur flutt sína skrivstovu innan frálandavinnu og útgerð til Stavanger.

Meira áhugavert

- Eg haldi, at tendensurin er, at felög so smátt byrja at rigga av í Aberdeen, tí býurin gerst minni og minni áhugaverdur, samstundis sum áhugin veksur norðari á havinum. Orsókin er, at so hvört, sum olju-og frálandavirksemið veksur norðanfyri, gerst tað ov langt at sigla til Aberdeen.

Hann heldur, at henda gongdin ger tað uppaftur meira áhugavert hjá okkum føroyingum, sum

lyklastøðu

Hóast einki oljurelatarað tænastuvirksemi er við oljubryggjuna hjá Runavíkar havn í lötuni, kemur atlögjan kortini væl við. Mánamorganin lógu hesi stóru skipini við bryggjuna

Mynd: Vilmund Jacobsen

Rúni Berg

Mynd: Vilmund Jacobsen

BERAS veitir supply-tænastu

Síðan 2001 hevur Teymavirkid hjá Rúna Berg í Runavík verið veitari til oljuvinnuna um sölunavnið Beras, sum felagið hevur brúkt í marknaðarföring av síni tænastu á hesum øki

luttökuni.

- Soleiðis, sum stóðan er í dag, noyðist eg á ein fund í Noregi um somu tið, sum ráðstevnan er í Aberdeen. Men nú fáa vit at síggja, hvussu leikur fer. Vit hava verið við og hava víst andlit - eisini, tá ongar boringar hava verið á feroyska landgrunninum.

Hann sigur, at virksemið hjá Beras hevir virkað væl, og við seinastu leitiboring á feroyska landgrunninum høvdut teir största virksemið, sum higartil hevir verið.

Á einum stað

- Tað er soleiðis, at tá ið oljufelög leiga pallar til leitiboring, taka felögini yvir, sum eru við í verkætlani, og tað er hesi felög, vit servisera um Beras, sigur Rúni.

Hann visir á, at sölunavnið hevir verið veitari av öllum tí leysa, sum hesi felög hava havt brúk fyri - heilt frá klæðum og provianti til amboð, maskinlitr og stál.

- Endamálið við okkara tænastu er, at felögini, sum arbeiða á feroyska landgrunninum, kunnu venda sær til ein veitara, sum so syrgir fyri, at tey fáa allar ter tænastur, sum tey hava brúk fyri. Soleiðis sleppa felögini undan at leita eftir ymiskum veitarum fyri at nøkta tann tørv, tey hava, meðan tey arbeiða um feroyskan bryggjukant, leggur Rúni aftrat.

Ikki samanhangandi

Hann sigur, at trupulleikarnir hjá slíkum veitara sum Beras kundi verið, at virksemið av hesum slagi ikki er samanhangandi.

- Men vit hava eina stóra fyritøku, sum kortini er virkin alt árið, og tí hava vit umstøður til at skipa hetta "konseptið", sum Beras er, tá oljufelögini hava brúk fyri hesi tænastu, sigur Rúni Berg.

liggja fram við i frálandavinnuni.

- Eg haldi, at Føroyar kunnu koma at sita í eini lyklastøðu, og eg vænti, at vit fara at merkja hetta við veksandi og støðugari aktiviteti innan flutning, útgérð og tænastu, sum árini ganga. Vit eiga at síggja positivt upp á hesa gongd, heldur hann.

Klæmint visir á, at nú seinasti brunurin í hesum umfari verður boraður í feroyskum øki í vetrur, bendir hetta á, at áhugin fyri feroyska landgrunninum er stórus og veksandi.

- At olja í rakstrarverdum nøgdum nú er funnin so stutt úr feroyska markinum, at teinurin ikki er longur enn av Nesi til Havnar, hevir ivaleyst økt um áhugin hjá oljufelögum at seta borin í aftur.

Aktivt kolvetni

Klæmint Østerø heldur, at tað sigur ikki so lítið um áhugin i feroyskum øki, nú henda seinasta boringin verður fram, tá tað fer at stunda móti vetrí.

- Eg havi skilt, at tað eru somu strukturar í undirgrundini, sum breiða seg úr bretskum øki og inn í feroyskt øki, so hetta sær rættilega spennandi út.

Sjálvur havi eg ongantíð ivast í, at olja í rakstrarverdum nøgdum

fer at verða funnin í feroyskum øki, men spurningurin er bara, nær tað verður - og ikki um tað verður.

Hann sigur, at vit longu nú vita, at aktivt kolveti er í feroysku undirgrundini.

- Felögini skulu bara finna rætta staðið at bora í. Jú, eg haldi, at tað hevir ongantíð verið so spennandi við einari leitiboring sum hesaferð. Vitamin um jarðfrøðina gerst storrí alla tíðina, og bæði seismiskar skjöttingar og tær leitiboringar, sum longu eru framdar, eru við til at geva áhugaðu felögum eina stórrí vitan um okkara undirgrund og möguleikarnar at finna olju í rakstrarverdum nøgdum, sigur Klæmint.

Seinasti sáttmálin

Hann visir á, at framvegis er galldandi, at veitingar í sambandi við oljuboring á feroyska landgrunninum skulu ganga um feroyskan bryggjukant, og til kemur boringin, sum verður í vetrur, aftur at skapa eitt ávist virksemi á Atlantic Supply Base og á havnaøkinum hjá Runavíkar havn.

- Tað skapar nokso fitt av virksemi, meðan boringin stendur upp á, og hetta virksemið er ikki bara í okkara

øki, men eisini í avleiddum virksemi, sum sæst aftur aðrastaðni í landinum, sigur Klæmint.

Hann visir á, at tá ið hendas leitiboringin er liðug, hevir Atlantic Supply Base ikki fleiri sáttmálar á hesum sinni.

- Vit hava bara eina oljuútgerðarhavn í Føroyum, og her hevir eyndast okkum at byggja upp eina munandi ekspertisuá á økinum. Tað skulu ti góðar grundgevingar til at flyta oljuhavnina aðrastaðni, tá nýggir sáttmálar skulu gerast í framtíðini. So, tað vænti eg ikki kemur upp á tal, sigur Klæmint.

Førleikamenning

Havnanevndarformaðurin hjá Runavíkar kommunu sigur, at Atlantic Supply Base eisini hevir syrt fyri, at fólk hava fingið ta førleikamenning, sum skal til, og soleiðis hava fólk alla tíðina ment seg - eisini, meðan leitiboringarnar hava ligið stillar.

- Fólk hava luttkið á skeiðum, bæði trygdarskeiðum og skeiðum, sum krevjast til frálandavirksemi og oljuútgerðarhavn, og fylgt hevir alla tíðina verið við gongdini á økinum, sigur Klæmint Østerø.

Tvey eftirnøvn

Rúni Berg sigur, at navnið Beras er sett saman av eftirnøvnunum Berg og Rasmussen.

- Kenneth Rasmussen hevir arbeitt hjá okkum fram til vårs, og tað eru eftirnøvnini hjá okkum báðum, sum mynda navnið Beras.

Hann sigur, at Beras er ikki nakað sjálvtøðugt felag, men bert eitt sölunavn - ella eitt konsept, ið Teymavirkid hevir brúkt í marknaðarföringini av hesi supply-tænastu.

- Tað hevir serliga verið Kenneth, sum hevir tikið sær av hesum virksemi, og nú hann ikki arbeiðir hjá okkum meira, fellir henda uppgáva mær í lut.

Ivasom littóka

Ætlandi skuldi Teymavirkid eisini verða við á oljuráðstevnum í Aberdeen hesaferð, men tá vit høvdut Rúna í telefonini sunnukvøldið, var ivasamt við

Your job on the sea

– is our job in the air

Atlantic Airways is the national airline of the Faroe Islands. We operate scheduled services from the Faroe Islands to Denmark, Iceland, Norway, and the UK. We provide charter services in Europe with both fixed wing aircrafts and helicopters and specialise in supporting the oil industry, both offshore and domestic.
